Smart Graphics Andreas Butz, Brian Fisher, Antonio Krüger, Patrick Olivier, Marc Christie, 2008-08-25 For centuries artists and designers have been creating communicative graphics With the advent of new forms of media the emergence of paradigms such as ubiquitous computing and the rapid evolution of interaction devices there is a continuous cycle of renewal of the technologies and methods to support artists interaction designers and developers Developing new approaches requires an understanding of the fundamentals of perception and cognition as they relate to interaction and communication technologies together with artificial intelligence and computer graphics techniques to automate reasoning and enhance cognition Smart Graphics is in essence an interdisciplinary endeavor and brings together the fields of computer graphics artificial intelligence cognitive science graphic design and new art The International Symposium on Smart Graphics 2008 was held on August 27-29 in Rennes France It was the ninth event in a series which originally started in 2000 as an American Association for Artificial Intelligence Spring Symposium and has taken place every year since then Due to the high quality of the papers submitted this year the Program Committee decided to accept 17 full papers instead of the usual 15-19 short papers and 3 system demonstrations The acceptance rate for full papers was 34% This year's meeting included a discussion as to the nature of the shape content and future of the event Representatives from different communities were invited to give their opinions and the organizing committee would like to warmly thank them here Such questions as the ongoing viability of the symposium and the consequences of co-locating Smart Graphics with other larger research events led to interesting debates and have prepared the groundwork for what could be the future of the Smart Graphics conference series

Mineral Dissolution Kinetics: New Perspectives Victor W Truesdale, Jim E Greenwood, Tim G Southern, 2025-05-09 Mineral Dissolution Kinetics New Perspectives is at its core a search for a universal rate equation for mineral dissolutions It documents and details the journey undertaken by its authors appealing not only to specialists and experts in related fields but also to novice readers seeking to learn more about this unique subject The book reveals how the compounding of many otherwise subtle misunderstandings has resulted in the under development of fundamental concepts in mineral dissolution kinetics despite its long history of study By examining a wide cross section of existing studies it uncovers

these misunderstandings and forges a new way forward Although mineral dissolution kinetics has been immensely important in explaining continental weathering landform development and the maintenance of water supplies for agricultural and human use it remains a critically undervalued field of chemistry It is also foundational to our understanding of the marine environment and serves as an essential tool in the long term storage of CO₂ and radionuclide waste More recently it has helped address the human induced rise in tropospheric CO₂ a key cause of global warming and ocean acidification Complex subjects such as the hydrodynamics of dissolution the thermodynamics of the aqueous carbonate system and central omissions at the very core of homogeneous kinetics are explained clearly and simply while still remaining at the cutting edge of the field
