

ADMINISTRATION AND SCORING

Either scale can be used by itself. However, when using both together, it is recommended that the State-anxiety form be administered first (Spielberger *et al.*, 1970). The inventory is self-administering (either individually or in groups). Though there is no time limit, completion of both forms seldom requires more than twenty minutes.

In both forms some of the items are worded in such a way that a response of 1 indicates little anxiety or absence of anxiety, and a response of 4 indicates high anxiety. Other items are worded so that a response of 1 would indicate high anxiety. The simplest way to score either scale is to add the ratings given to the direct items and reversed items and subtract the sum of the reversed items from the sum of the direct items and to add a constant. If the subject fails to respond to one or more items, a complicated procedure for scoring has been recommended (Spielberger *et al.*, 1970). It should be mentioned here that all the subjects used in the present study understood very well the instructions given to them while filling in these forms, and none of them failed to answer any one of those items mentioned in both the forms.

The score for either form can range from 20 to 80, the higher the score the greater is the level of anxiety. To reduce the potential influence of an acquiescence set on STAI responses, it would be desirable to have balanced A-State and A-Trait scales, with equal numbers of items for which high ratings indicate high and low anxiety. The STAI A-State scale is balanced for acquiescence set, with ten directly scored and ten reversed items. It was not possible, however, to develop a balanced A-Trait scale from the original item pool; the STAI A-Trait scale has seven reversed items and thirteen that are scored directly. The reversed items on the STAI subscales are:

A-State scale: 1, 2, 5, 8, 10, 11, 15, 16, 19 and 20.

A-Trait scale: 1, 6, 7, 10, 13, 16, and 19.

Templates are available for scoring the STAI A-Trait and A-State scales by hand. To score each scale, place the appropriate template on the test form and add the response values printed on the key for each item. This is most conveniently done with a simple hand counter, but one may also use an adding machine, a desk calculator, or do the adding in his head. Make certain that the correct template is used to score the STAI A-State and A-Trait scales. The
