

A HISTORY OF **MANUAL VEHICLE TRANSMISSIONS**

BEFORE THE MANUAL TRANSMISSION

The manufacturers of history designed the first cars with what people called a rear-engine setup. This design only allowed for a single-speed transmission. This means it did not need gear changes, and thus there were no gears to shift manually.

MANUAL TRANSMISSIONS CHANGE THE GAME

Louis-Rene Panhard and Emile Levassor were the first to develop the manual transmission. They created a three-speed "sliding-mesh" design that still lives on as the functional foundation for current transmissions.

Louis Renault was the next creative genius to enter the mix—now also the name of a leading automaker in Europe. This Frenchman came up with another way for the manual transmission to accomplish the same gear-changing motions with a different mechanical method. His improvements increased the performance of the manual transmission, making it a stronger, more effective automotive part.

MAKING MANUAL ACCESSIBLE

Earl Avery Thompson was the first to come up with synchromesh, a revolutionary way to synchronize the forward gears during gear shifts. The synchronizer rings enable the speed of the shaft and the speed of the newly selected gear to match. This transformation made manual transmission much more accessible, reducing the amount of frustration and need for repair.
