

Trim angle adjustment

If a boat "plows" or "squats" during a cruise due to an improper distribution of loads (cargos and passengers) or the type of the stern, propulsion by the outboard motor will be greatly reduced and hard steering may result. That is, outboard motor performance will be adversely affected. In this case, the trim angle should be properly adjusted.

The tilt pin position should be selected so that the anti-cavitation plate is parallel to the water surface when the boat is running at full speed.
