Pisano, 1997 When the pharmaceuticals giant Merck reports promising results for a potential blockbuster drug the story makes the evening news Now at a time when new product development has become critical to success in so many industries The Development Factory proves that process innovation not just product innovation can be the key to competitive edge In this multiyear study of pharmaceutical and biotechnology firms Gary Pisano explores the dynamics of superior product and process development in a highly competitive industry that lives and dies by its R D and depends heavily on rapid time to market His work reveals that behind the success of many new product introductions lies the development of novel process technologies that provide lower costs higher quality and increased flexibility Pisano challenges the widely held product process life cycle view of competition which suggests that industries tend to emphasize either product innovation or process innovation. He also questions the notion that there is a conflict between pursuit of product innovation and pursuit of lower costs arguing that product development and process development capabilities are complementary Extending the lessons to a wide variety of manufacturing industries The Development Factory will guide companies toward unlocking the potential of process development and understanding the patterns of organizational behavior and managerial actions that help create and implement new capabilities over time Virtual and Augmented Reality Technology-Enhanced Learning Yivu Cai, Umesh Ramnarain, Jean Jiegiong Chen, 2025-06-16 This book consists of chapters that present the state of the art research and applications of Virtual Augmented Reality Technology enhanced Learning VARTeL The chapters of the book present a multi facet view on different approaches to deal with challenges that surround the uptake of educational applications of mixed reality simulations and serious games in various practices.
