yourself with the cutting edge of power system protection technology All electrical systems are vulnerable to faults whether
produced by damaged equipment or the cumulative breakdown of insulation Protection from these faults is therefore an
essential part of electrical engineering and the various forms of protection that have developed constitute a central
component of any course of study related to power systems Particularly in recent decades however the demands of
decarbonization and reduced dependency on fossil fuels have driven innovation in the field of power systems With new
systems and paradigms come new kinds of faults and new protection needs which promise to place power systems protection
once again at the forefront of research and development Protection of Modern Power Systems offers the first classroom
ready textbook to fully incorporate developments in renewable energy and smart power systems into its overview of the field
It begins with a comprehensive guide to the principles of power system protection before surveying the systems and
equipment used in modern protection schemes and finally discussing new and emerging protection paradigms It promises to
become the standard text in power system protection classrooms Protection of Modern Power Systems readers will also find
Treatment of the new faults and protection paradigms produced by the introduction of new renewable generators Discussion
of SmartGrids intelligently controlled active systems designed to integrate renewable energy into the power system and their
protection needs Detailed exploration of Synchronized Measurement Technology and Intelligent Electronic Devices
