1. General Switch
2. Pressure Guage
3. General Switch Signal Lamp
4. No-water Signal Lamp and Water-filling Signal Lamp
5. Temperature Indicator / Thermoregulator
6. Vapor Delivery Control Switch
7. General Switch for Pump-heater feeding
8. Vapor Delivery Regulator
9. Flexible Hose Socket
10. Water and Detergent Compartment

PREPARATION

Plug machine into appropriate electrical socket. It requires a THREE-PHASE 440V-50HZ connection (Fig. 3).

NOTE: Manufacturer not liable for any damage caused by operation with voltage values not compliant with those indicated.

Turn on machine by turning the general switch, located on the side of the control panel (Fig.3) to the "On" position. The signal lamp (1-Fig. 4) on the control panel indicates that machine is feeding correctly.

Low water level in the tank is indicated by the no-water signal lamp (2-Fig. 4) and an acoustic sound signal.

With machine is "On", pump-heater feeding (3-Fig 4) begins: the temperature display (4-Fig. 4) will blink for 4-5-seconds. When it turns solid, it indicates the internal boiler temperature is set. The signal lamp (2-Fig. 4) will turn on for approx. 2 seconds and then turns off.

Hartung,1971 The

report contains an assessment of current shell analysis capability The assessment is based on work conducted at the Lockheed Palo Alto Research Laboratory under contract to the Air Force Flight Dynamics Laboratory In addition to surveying the open literature information for the study was gathered during a series of visits made to organizations throughout the United States at which there is an active shell analysis research effort More than 40 industrial concerns government agencies and universities have been visited to date During each visit technical personnel working in the area of shell analysis were interviewed to determine the scope of their present analysis capability to learn of current research activities and to discuss computer methods of shell analysis in general Information so obtained is summarized in a series of briefs which appear in the Appendix of this report *Numerical and Computer Methods in Structural Mechanics* Steven J.

Fenves,Nicholas Perrone,Arthur R. Robinson,2014-05-10 Numerical and Computer Methods in Structural Mechanics is a compendium of papers that deals with the numerical methods in structural mechanics computer techniques and computer capabilities Some papers discuss the analytical basis of the computer technique most widely used in software that is the finite element method This method includes the convergence in terms of variation principles isoparametrics hybrid models and incompatible displacement models Other papers explain the storage or retrieval of data as well as equation solving algorithms Other papers describe general purpose structural mechanics programs alternatives to and extension of the usual

finite element approaches Another paper explores nonlinear dynamic finite element problems and a direct physical approach to determine finite difference models Special papers explain structural mechanics used in computing particularly those related to integrated data bases such as in the Structures Oriented Exchange System of the Office of Naval Research and the integrated design of tanker structures Other papers describe software and hardware capabilities for example in ship design fracture mechanics biomechanics and crash safety The text is suitable for programmers computer engineers researchers and scientists involved in materials and industrial design

Plastics have become increasingly important in the products used in our society ranging from housing to packaging transportation business machines and especially in medicine and health products Designing plastic parts for this wide range of uses has become a major activity for designers architects engineers and others who are concerned with product development Because plastics are unique materials with a broad range of proper ties they are adaptable to a variety of uses The uniqueness of plastics stems from their physical characteristics which are as different from metals glasses and ceramics as these materials are different from each other One major concern is the design of structures to take loads Metals as well as the other materials are assumed to respond elastically and to recover completely their original shape after the load is removed Based on this simple fact extensive litera ture on applied mechanics of materials has been developed to enable designers to predict accurately the performance of structures under load Many engineers depend on such texts as Timoshenko s *Strength of Materials* as a guide to the performance of structures Using this as a guide generations of engineers have designed economical and safe structural parts Unfortunately these design principles must be modified when designing with plastics since they do not respond elastically to stress and undergo permanent deformation with sus tained loading
