[Experiment and the Making of Meaning](#) D.C. world into an empirical world of pre articulate experience and know how and another world of talk thought and argument Most received philosophies of science focus so exclusively on the literary world of representations that they cannot begin to address the philosophical problems arising from the interaction of these worlds empirical access as a source of knowledge meaning and reference and of course realism This has placed the epistemological burden entirely on the predictive role of experiment because it is argued testing predictions is all that could show that scientists theorizing is constrained by nature Here a purely literary approach contributes to its own demise The epistemological significance of experiment turns out to be a theoretical matter cruciality depends on argument not experiment **Resources in Education** ,1980-06 *Catalogue*
