Vocabulary: force, gravity, vector

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

On the night of a Full Moon, Mary decided to do an experiment with gravity. At midnight, she brings a black cat to the graveyard. She stands next to her favorite headstone, holds the cat in the air, and lets go. The cat falls to the ground, hisses at her, and runs away.

1. Why did the cat fall to Earth instead of rising up to the Moon? _____

2. Give two reasons why we feel Earth's gravity more strongly than the Moon's gravity.

Gizmo Warm-up

From black cats to apples, gravity causes nearly any object to fall to Earth's surface. Gravity also causes the Moon to orbit Earth and Earth and the other planets to orbit the Sun. The *Gravitational Force Gizmo™* allows you to explore the factors that influence the strength of gravitational force.

To begin, turn on the **Show force vector** checkboxes for objects A and B. The arrows coming from each object are ~~representations~~ that represent gravitational forces. The length of each vector is proportional to the force on each object.

1. Move object A around. As object A is moved, what do you notice about the direction of the two force vectors? _____
2. How do the lengths of the two vectors compare? _____
3. Drag object A closer to object B. How does this change the gravitational force between the two objects? _____

The Answer For Gravitational Force Gizmo:

Physics Avoidance Mark Wilson, 2017-10-20 Mark Wilson presents a series of explorations of our strategies for understanding the world Physics avoidance refers to the fact that we frequently cannot reason about nature in the straightforward manner we anticipate but must seek alternative policies that allow us to address the questions we want answered in a tractable way Within both science and everyday life we find ourselves relying upon thought processes that reach useful answers in opaque and roundabout manners Conceptual innovators are often puzzled by the techniques they develop when they stumble across reasoning patterns that are easy to implement but difficult to justify But simple techniques frequently rest upon complex foundations a young magician learns how to execute a card guessing trick without understanding how its progressive steps squeeze in on a proper answer As we collectively improve our inferential skills in this gradually evolving manner we often wander into unfamiliar explanatory landscapes in which simple words encode physical information in complex and unanticipated ways Like our juvenile conjurer we fail to recognize the true strategic rationales underlying our achievements and may turn instead to preposterous rationalizations for our policies We have learned how to reach better conclusions in a more fruitful way but we remain baffled by our own successes At its best philosophical reflection illuminates the natural developmental processes that generate these confusions and explicates their complexities But current thinking within philosophy of science and language works to opposite effect by relying upon simplistic conceptions of cause law of nature possibility and reference that ignore the strategic complexities in which these concepts become entangled within real life usage To avoid these distortions better descriptive tools are wanted The nine new essays within this volume illustrate this need for finer discriminations through a range of revealing cases of both historical and contemporary significance **New Scientist** ,2007 **New Scientist and Science Journal** ,2007-10
