/ Chen Ligong,2025-05-20 This book revisits the history of statistics and by focusing on the critical turning point across the 1920s and 1930s redraws the proper trajectory of its development It expands the theoretical and algorithmic foundations of statistics from the special case of the normal distribution arithmetic mean Amean to the more general framework of centralized distribution convex self weighted mean Cmean thereby providing a philosophical historical and algorithmic foundation for reconstructing the discipline Grounded in fundamental principles of epistemology the book systematically introduces new statistical ideas and methods achieving key breakthroughs and innovations in the following areas 1 The construction of a cognitive framework driven by a both rigorous and powerful four dimensional logic abstraction induction deduction and dialectics 2 The establishment of a new preliminary conceptual system for statistics and the new conceptual system may help to eliminate some fundamental errors in the current statistics such as numerical optimization as well as other algorithms introduced by deterministic mathematical thinking mode 3 The proposal of self weighting and convex self weighted mean or simplified to Cmean algorithms for continuous variables without distinguishing normal and skewed thereby achieving expectation estimate of a distribution with a centralized location in a unified framework 4 The development of a method for testing parameter differences independent of normalization and normality assumptions 5 The reconstruction of piecewise regression methods through a weighted approach that combines global modeling with a generalized trichotomy thus avoiding overfitting and enhancing model interpretability and generalizability The central theme of the book is clear philosophical thinking is not only the foundational source of statistics but also the key force driving its methodological innovation and paradigm shift The above five aspects with ground breakthroughs developed in this book is heralding a new era in statistical science To assist readers in understanding and applying the proposed ideas and algorithms the author provides essential SAS code in the appendix allowing readers to test the statistical performance of the methods with their own data As a specialized work on statistics it does not delve into highly abstract mathematical theory Instead it uses a philosophy style narrative that aligns closely with natural human language and relies on minimal mathematical skills making it accessible to anyone with a high school education or above Therefore this book is intended for professionals engaged in education research and application in the field of statistics as well as those junior to senior researchers across all disciplines In particular those aspiring to make achievements in statistical methodology will find this book a rich source of insight and inspiration Language Note This book was originally written in his native language Chinese then translated into
