The Autopoiesis Of Architecture Book:

The Autopoiesis of Architecture, Volume I Patrik Schumacher, 2011-04-20 Take a theoretical approach to architecture with The Autopoiesis of Architecture which presents the topic as a discipline with its own unique logic Architecture's conception of itself is addressed as well as its development within wider contemporary society Author Patrik Schumacher offers innovative treatment that enriches architectural theory with a coordinated arsenal of concepts facilitating both detailed analysis and insightful comparisons with other domains such as art science and politics He explores how the various modes of communication comprising architecture depend upon each other combine and form a unique subsystem of society that co evolves with other important autopoietic subsystems like art science politics and the economy The first of two volumes that together present a comprehensive account of architecture's autopoiesis this book elaborates the theory of architecture's autopoiesis in 8 parts 50 sections and 200 chapters Each of the 50 sections poses a thesis drawing a central message from the insights articulated within the respective section The 200 chapters are gathering and sorting the accumulated intelligence of the discipline according to the new conceptual framework adopted in order to catalyze and elaborate the new formulations and insights that are then encapsulated in the theses However while the theoretical work in the text of the chapters relies on the rigorous build up of a new theoretical language the theses are written in ordinary language with the theoretical concepts placed in brackets The full list of the 50 theses affords a convenient summary printed as appendix at the end of the book The second volume completes the analysis of the discourse and further proposes a new agenda for contemporary architecture in response to the challenges and opportunities that confront architectural design within the context of current societal and technological developments

The Autopoiesis of Architecture, Volume II

Patrik Schumacher, 2012-04-24 This is the second part of a major theoretical work by Patrik Schumacher which outlines how the discipline of architecture should be understood as its own distinct system of communication Autopoiesis comes from the Greek and means literally self production it was first adopted in biology in the 1970s to describe the essential characteristics of life as a circular self organizing system and has since been transposed into a theory of social systems This new approach offers architecture an arsenal of general comparative concepts It allows architecture to be understood as a distinct discipline which can be analyzed in elaborate detail while at the same time offering insightful comparisons with other subject areas such as art science and political discourse On the basis of such comparisons the book insists on the necessity of disciplinary autonomy and argues for a sharp demarcation of design from both art and engineering Schumacher accordingly argues controversially that design as a discipline has its own sui generis intelligence with its own internal logic reach and limitations Whereas the first volume provides the theoretical groundwork for Schumacher's ideas focusing on architecture as an autopoietic system with its own theory history medium and its unique societal function the second volume addresses the specific contemporary challenges and tasks that architecture faces It formulates these tasks looking specifically at how

architecture is seeking to organize and articulate the complexity of post fordist network society The volume explicitly addresses how current architecture can upgrade its design methodology in the face of an increasingly demanding task environment characterized by both complexity and novelty Architecture s specific role within contemporary society is explained and its relationship to politics is clarified Finally the new global style of Parametricism is introduced and theoretically grounded

Play Among Books Miro Roman,Alice_ch3n81,2021-12-06 How does coding change the way we think about architecture This question opens up an important research perspective In this book Miro Roman and his AI Alice_ch3n81 develop a playful scenario in which they propose coding as the new literacy of information They convey knowledge in the form of a project model that links the fields of architecture and information through two interwoven narrative strands in an infinite flow of real books Focusing on the intersection of information technology and architectural formulation the authors create an evolving intellectual reflection on digital architecture and

computer science *The Evolution of Computation in Architecture* Michael Fox, Bradley Bell, 2024-10-31 This book is the first comprehensive overview of the pioneering works, events and people that contributed to the paradigm shift defined by computation in architecture. Only recently has computation fostered profound new ways of designing, fabricating, constructing and thinking about architecture. While the profession sits at the end of the beginning of this historically transformative shift, it is now possible to look back upon the rapidly maturing landscape of projects, influencers and tools that have finally begun to catch up with the visionary thinking of the past. Readers are guided through the fascinating and fast-paced historical timeline of the development of computation in architecture. Beginning with an account of the pioneering futuristic thinkers, the authors then guide the reader through the birth of computation, the appropriation of tools and the impact of experimentation on the profession, leading into the legitimacy of research and how paradigms have been expanded. The examples and influences are presented in a way that they can be understood and built upon. This book is a must-read for students of computation in architecture as well as researchers and practicing architects thinking about how the tools we use and the ways we design our buildings and environments with them can truly impact our lives. *Animate(d) Architecture* Vahid Vahdat, 2024-03-25 At their peak, architectural marvels such as the Sagrada Família, the Tower of London, the Mosque Cathedral of Córdoba and the Eiffel Tower had a combined annual visit of almost 16.4 million people. The animated icebound castle in Disney's 2019 *Frozen* had 116.4 million views from one single YouTube trailer in less than 24 hours. The spaces of such massively consumed animation have for generations informed the architectural imagination of people across the globe and from very early in their lives. Yet not only have the architectural disciplines remained rather absent in the design of these massively consumed spaces, architectural theory has likewise failed to articulate a framework to approach the architecture of animation. To address this void, this book offers an interdisciplinary approach to survey the role of space in animation, including in creating humorous moments in early cartoon shorts, generating action and suspense in Japanese anime and even stimulating erotic pleasure in pornographic Hentai. Exploring the imagined architecture of animation from early motion picture to digital animation and from computer graphics to game engines offers an analytical frame to reconceptualize space. An Open Access version of Yuko Yoshida's chapter *Animated Embodiments of Witnessing An Architectural Narrative of Silence* is available on the Liverpool University Press website. **Parametricism 2.0** Patrik Schumacher, 2016-04-25 Parametricism is an avant-garde architecture and design movement that has been growing and maturing over the last 15 years, emerging as a remarkable global force. The tendency started in architecture but now encompasses all design disciplines from urban design to fashion. In architecture, the style has an international following and is currently progressing beyond its experimental roots to make an impact on a broader scale with practices like Zaha Hadid Architects (ZHA) winning and completing large-scale architectural projects worldwide. Parametricism implies that all elements and aspects of an architectural composition or product are parametrically malleable and the style owes its original unmistakable physiognomy

to its unprecedented use of computational design tools and fabrication methods All design parameters are conceived as variables that allow the design to vary and adapt to the diverse complex and dynamic requirements of contemporary society Although Parametricism has been talked about and hotly debated for a number of years so far there has been no publication dedicated to Parametricism The issue is guest edited by Patrik Schumacher partner at ZHA and one of the world's most highly renowned advocates of Parametricism Contributors Philippe Block Shajay Bhooshan Mark Burry Mario Carpo Manuel DeLanda John Frazer Mark Foster Gage Enriqueta Llabres and Eduardo Rico Achim Menges Theo Spyropoulos Robert Stuart Smith Philip F Yuan Featured architects and designers Arup Mark Fornes THEVERYMANY Zaha Hadid Architects ZHA and Ross Lovegrove

Architecture's Theory Catherine Ingraham, 2023-04-18 A collection of illuminating essays exploring what theory makes of architecture and what architecture makes of theory in philosophical and materialized contexts From poststructuralism and deconstruction to current theories of technology and nature critical theory has long been closely aligned with architecture In turn architecture as a thinking profession materializes theory in the form of built work that always carries symbolic loads In this collection of essays Catherine Ingraham studies the complex connectivity between architecture's discipline and practice and theories of philosophy art literature history and politics She argues that there can be no architecture without theory Whether considering architecture's relationship to biomodernity or exploring the ways in which contemporary artists and designers engage in figural play Ingraham offers provocative interpretations that enhance our understanding of both critical theory and architectural practice today Along the way she engages with a wide range of contemporary theorists including Giorgio Agamben Judith Butler Jacques Derrida Graham Harman and Timothy Morton considering buildings around the world including the Palace of Culture in Warsaw the Viceroy's House complex in New Delhi Mack Scogin and Merrill Elam's Wolfsburg Science Center project in Germany and the Superdome in New Orleans Approaching its subject matter from multiple angles Architecture's Theory shows how architecture's theoretical and artifactual practices have a unique power to alter culture

Architectural Technicities Stavros Kousoulas, 2022-07-15 This book poses a simple question how is this architecture possible To respond it will embark on a captivating journey through many singular architectural concepts The entasis of Doric columns Ulysses and desert islands will outline an architectural act that moves beyond representation A ferryman who stutters will present two different types of architectural minds A stilus and a theory of signs will reconsider the ways architects can develop a particular kind of intuition while architectural technicities will bring forth a membranous and territorial understanding of architecture Finally as a melody that sings itself a larval architecture will be introduced bringing space and time together Assisting this endeavour the thought of philosophers like Gilles Deleuze Felix Guattari Gilbert Simondon and Raymond Ruyer will meet the latest developments in fields like affect theory cognitive sciences environmental studies and neuroanthropology Eventually by the end of this book the readers from architecture students and researchers to academics and practitioners with an interest in theory will have

unconventional and original humanistic theory of CAD computer aided design the author suggests that beyond the generation of innovative engineering forms digital design has the potential to affect the wider complex cultural landscape of today in profound ways The book is organised around a synthetic and hybrid research methodology a contemporary propositional and theoretical discursive investigation and a design led empirical research Both methods inform a critical construct that deals with the nature forms and laws of digitality within a contemporary architectural discourse that affects practice and academia The chapters spiral at from towards around outside inwards and back inside out digitality its cognitive phenomena spatial properties and intrinsic capabilities to achieve or at least approach Digital Poetics The book presents speculative and small scale constructed projects that pioneer techniques and experiments with common 3D and 4D software packages whereby the focus lies not on the drawing processes and mechanics but on the agency and impact the image its reading experience interpretation achieves on the reader and observer The book also features a preface by Fr d ric Migayrou a philosopher and curator and one of the most influential cultural engineers of the contemporary international architectural scene The book is linked to a website which contains a larger selection of images of some featured projects

Architecture and Spectacle: A Critique Gevork Hartoonian, 2016-12-05 Focusing on six leading contemporary architects Peter Eisenman Frank Gehry Bernard Tschumi Zaha Hadid Rem Koolhaas and Steven Holl this book puts forward a unique and insightful analysis of neo avant garde architecture It discusses the spectacle and excess which permeates contemporary architecture in reference to the present aesthetic tendency for image making but does so by applying the tectonic of theatricality discussed by the 19th century German architect Gottfried Semper In doing so it breaks new ground by opening up a dialogue between the study of the past and the design of the present The work of each discussed architect is seen as addressing a historiographical problem To this end and this is the second important aspect of this book the chosen buildings are discussed in terms of the thematic of the culture of building the tectonic of column and wall for example rather the formal and this through a discussion that is informed by the latest available theories Having set the aesthetic implication of the processes of the digitalization of architecture the book s conclusion highlights strategies by which architecture might postpone the full consequences of digitalization and thus the becoming of architecture as ornament on its own right

Architecture | Design | Data Phillip Bernstein, 2018-09-24 A systemic transformation is underway in architectural design engineering and construction The discipline and profession of architecture is being reshaped in a moment where information insight and predictions generated during the design process move into construction no longer essentially via drawings Other more profound digital techniques yield fundamentally different workflows responsibilities and business models for architects This book offers a comprehensive framework detailed analysis and critical assessment of the challenges and opportunities inherent in those changes The author sets out to provide direction for a new era in architectural creation that can be understood and managed by a profession which must become better equipped to direct its future
