Skolnik,2010-10-20 Physician adoption of electronic medical records EMRs has become a national priority It is said that EMRs have the potential to greatly improve patient care to provide the data needed for more effective population management and quality assurance of both an individual practice s patients and well as patients of large health care systems and the potential to create efficiencies that allow physicians to provide this improved care at a far lower cost than at present There is currently a strong U S government push for physicians to adopt EMR technology with the Obama administration emphasizing the use of EMRs as an important part of the future of health care and urging widespread adoption of this technology by 2014 This timely book for the primary care community offers a concise and easy to read guide for implementing an EMR system Organized in six sections this invaluable title details the general state of the EMR landscape covering the government s incentive program promises and pitfalls of EMR technology issues related to standardization and the range of EMR vendors from which a provider can choose Importantly chapter two provides a detailed and highly instructional account of the experiences that a range of primary care providers have had in implementing EMR systems Chapter three discusses how to effectively choose an EMR system while chapters four and five cover all of the vital pre implementation and implementation issues in establishing an EMR system in the primary care environment Finally chapter six discusses how to optimize and maintain a new EMR system to achieve the full cost savings desired Concise direct but above all honest in recognizing the challenges in choosing and implementing an electronic health record in primary care **Electronic Medical Records A Practical Guide for Primary Care** has been written with the busy primary care physician in mind **Scientific and Technical Aerospace Reports** ,1973 **Large Aperture Array Radar Systems for Automotive Applications** Fabian Schwartau,2021-10-18 The radar besides camera and Lidar systems is a core sensor to enable autonomous driving The relatively limited angular resolution is the major drawback of the radar This thesis shows the development of a conceptual future radar system for automotive applications The focus is on providing a large antenna aperture to achieve the required high angular resolution Two genetic algorithms are developed to optimize the antenna array for a good side lobe level while providing high angular resolution Two demonstrators are built to implement certain aspects of the proposed radar system and prove the general concept viable The first demonstrator

features a large aperture with a limited side lobe level and is using a modular approach The modules are synchronized with a radio over fiber system The second demonstrator uses the previously proposed antenna array which is implemented with a synthetic aperture radar approach The system's capabilities in a real scenario are demonstrated and the reconstruction of a high resolution three dimensional image from the captured data is shown Das Radar stellt neben Kamera und Lidar Systemen einen zentralen Sensor für das autonome Fahren dar Dabei ist die relativ geringe Winkelauflösung der primäre Nachteil des Radars Diese Arbeit zeigt die Entwicklung eines konzeptionellen zukünftigen Radarsystems für automobiler Anwendungen Der Schwerpunkt liegt auf der Umsetzung einer großen Antennenapertur um die erforderliche hohe Winkelauflösung zu erreichen Zwei evolutionäre Algorithmen werden vorgestellt um das Antennen Array auf einen guten Nebenkeulen Pegel zu optimieren und gleichzeitig eine hohe Winkelauflösung zu erreichen Zwei Demonstratoren werden gebaut um bestimmte Aspekte des vorgeschlagenen Radarsystems zu implementieren und die Durchführbarkeit des allgemeinen Konzepts zu zeigen Der erste Demonstrator weist eine große Apertur mit einem begrenzten Nebenkeulen Niveau auf und verwendet einen modularen Ansatz Die Module sind mit einem Radio over Fiber System synchronisiert Der zweite Demonstrator verwendet die zuvor entworfene Antennenanordnung die mit einem Radar mit synthetischer Apertur realisiert wird Die Fähigkeiten des Systems werden in einem realen Szenario demonstriert und die Rekonstruktion eines hochauflösenden dreidimensionalen Bildes aus den erfassten Daten gezeigt
