Weaver, 1975 Medical X-ray Photo-optical Systems Evaluation United States. Bureau of Radiological Health, 1975 For the past several years a small group within the Division which now constitutes the Image Analysis Section of the Medical Physics Branch has been developing analytical methodology for evaluating the imaging performance of medical diagnostic x ray systems This includes the development and evaluation of a wide variety of methods of analysis for appraising the health impact of radiation exposure Many aspects of this performance have substantial impact on the patient radiation dose required for a given amount of diagnostic information and on the amount and quality of that information which can be obtained As a result of our early work and studies of the literature in this field we concluded that an international symposium devoted exclusively to this topic was

in order This present volume represents the culmination of our efforts toward that end Kenneth E Weaver M S and Robert F Wagner Ph D of the Image Analysis Section and Assistant Professor David J Goodenough Ph D of The Johns Hopkins Medical Institutions *Health Technology Assessment Reports* ,1985 Advanced Joining Technologies T.H.
