City Farmer Lorraine Johnson, 2011 City Farmer celebrates the new ways that urban dwellers are getting closer to their food Not only are backyard vegetable plots popping up in places long reserved for lawns but some renegades are even planting their front yards with food People in apartments are filling their balconies with pots of tomatoes beans and basil while others are gazing skyward and greening their rooftops with food plants Still others are colonizing public spaces staking out territory in parks for community gardens and orchards or convincing school boards to turn asphalt school grounds into growing grounds Woven through the book are the stories of guerrilla urban farmers in various cities of North America who are tapping city trees for syrup gleaning fruit from parks foraging for greens in abandoned lots planting heritage vegetables on the boulevard and otherwise placing food production at the centre of the urban community Additional stories describe the history of urban food production in North America revealing the roots of our current hunger for more connection with our food and the visionaries who have directed that hunger into action Throughout the book sidebars offer practical tips for how to compost how to convert a lawn into a vegetable bed and what edible plants are easy to grow with children among other topics

Using Neurophysiological Signals that Reflect Cognitive or Affective State Anne-Marie Brouwer, Thorsten O. Zander, Jan B. F. van Erp, 2015-07-27 What can we learn from spontaneously occurring brain and other physiological signals about an individual's cognitive and affective state and how can we make use of this information One line of research that is actively involved with this question is Passive Brain Computer Interfaces BCI To date most BCIs are aimed at assisting patients for whom brain signals could form an alternative output channel as opposed to more common human output channels like speech and moving the hands However brain signals possibly in combination with other physiological signals also form an output channel above and beyond the more usual ones they can potentially provide continuous online information about an individual's cognitive and affective state without the need of

conscious or effortful communication The provided information could be used in a number of ways Examples include monitoring cognitive workload through EEG and skin conductance for adaptive automation or using ERPs in response to errors to correct for a behavioral response While Passive BCIs make use of online neuro physiological responses and close the interaction cycle between a user and a computer system neuro physiological responses can also be used in an offline fashion Examples of this include detecting amygdala responses for neuromarketing and measuring EEG and pupil dilation as indicators of mental effort for optimizing information systems The described field of applied neuro physiology can strongly benefit from high quality scientific studies that control for confounding factors and use proper comparison conditions Another area of relevance is ethics ranging from dubious product claims acceptance of the technology by the general public privacy of users to possible effects that these kinds of applications may have on society as a whole In this Research Topic we aimed to publish studies of the highest scientific quality that are directed towards applications that utilize spontaneously effortlessly generated neurophysiological signals brain and or other physiological signals reflecting cognitive or affective state We especially welcomed studies that describe specific real world applications demonstrating a significant benefit compared to standard applications We also invited original new kinds of proposed applications in this area as well as comprehensive review articles that point out what is and what is not possible according to scientific standards in this field Finally we welcomed manuscripts on the ethical issues that are involved Connected to the Research Topic was a workshop held on June 6 during the Fifth International Brain Computer Interface Meeting June 3 7 2013 Asilomar California that brought together a diverse group of people who were working in this field We discussed the state of the art and formulated major challenges as reflected in the first paper of the Research Topic

Efficient Management of Wastewater Ismail Al Baz, Ralf Otterpohl, Claudia Wendland, 2008-01-12

Water in the MEDA region is a crucial issue with regard to the availability of renewable water resources in the MEDA countries most will face even more serious problems in the management of their limited water resources in the near future This will require a lot of efforts to be made for more efficient management of water in order to secure the economic and social development of the coming generations According to the FAO 2006 the average of renewable water resources in the MENA region is below the limit of 1000 CM per Capita and Year for Egypt for example is this 794 CM for Algeria and Tunisia 481 CM for Jordan 180 Yemen 234 and Palestine 100 which are far below the limit of 500 CM that classify these countries as the most water stressed countries worldwide The alarming aspect is the fact that the limited renewable available water resources development have been decreasing in the last thirty years between 1974 2000 we had 66% decrease for Jordan and 64 % for Yemen due to the increasing population growth and the increase of water demands for agriculture industrial and domestic use These figures underline the importance of the topics of this book that shall give help

to experts and decision makers to overcome the future water resources problems in the region *Post Treatments of Anaerobically Treated Effluents* Vinay Kumar Tyagi, Abid Ali Khan, Ng Wun Jern, Anwar Khursheed, A. A. Kazmi, 2019-06-15

The anaerobic process is considered to be a sustainable technology for organic waste treatment mainly due to its lower energy consumption and production of residual solids coupled with the prospect of energy recovery from the biogas generated. However, the anaerobic process cannot be seen as providing the complete solution as its treated effluents would typically not meet the desired discharge limits in terms of residual carbon nutrients and pathogens. This has given impetus to subsequent post treatment in order to meet the environmental legislations and protect the receiving water bodies and environment. This book discusses anaerobic treatment from the perspective of organic wastes and wastewaters municipal and industrial followed by various post treatment options for anaerobic effluent polishing and resource recovery. Coverage will also be from the perspective of future trends and thoughts on anaerobic technologies being able to support meeting the increasingly stringent disposal standards. The resource recovery angle is particularly interesting as this can arguably help achieve the circular economy. It is intended the information can be used to identify appropriate solutions for anaerobic effluent treatment and possible alternative approaches to the commonly applied post treatment techniques. The succeeding discussion is intended to lead on to identification of opportunities for further research and development. This book can be used as a standard reference book and textbook in universities for Master and Doctoral students. The academic community relevant to the subject namely faculty researchers, scientists and practicing engineers will find the book both informative and as a useful source of successful case studies *Industry Standard FDSOI Compact Model BSIM-IMG for IC Design*

Chenming Hu, Sourabh Khandelwal, Yogesh Singh Chauhan, Thomas Mckay, Josef Watts, Juan Pablo Duarte, Pragya Kushwaha, Harshit Agarwal, 2019-05-21. Industry Standard FDSOI Compact Model BSIM IMG for IC Design helps readers develop an understanding of a FDSOI device and its simulation model. It covers the physics and operation of the FDSOI device explaining not only how FDSOI enables further scaling but also how it offers unique possibilities in circuits. Following chapters cover the industry standard compact model BSIM IMG for FDSOI devices. The book addresses core surface potential calculations and the plethora of real devices and potential effects. Written by the original developers of the industrial standard model, this book is an excellent reference for the new BSIM IMG compact model for emerging FDSOI technology. The authors include chapters on step by step parameters extraction procedure for BSIM IMG model and rigorous industry grade tests that the BSIM IMG model has undergone. There is also a chapter on analog and RF circuit design in FDSOI technology using the BSIM IMG model. Provides a detailed discussion of the BSIM IMG model and the industry standard simulation model for FDSOI all presented by the developers of the model. Explains the complex operation of the FDSOI device and its use of two independent control inputs. Addresses the parameter extraction challenges for those using this model.
