Collections Management as Critical Museum Practice Cara Krmpotich, Alice Stevenson, 2024-07-22 There is a common misconception that collections management in museums is a set of rote procedures or technical practices that follow universal standards of best practice This volume recognises collections management as a political critical and social project involving considerable intellectual labour that often goes unacknowledged within institutions and in the fields of museum and heritage studies Collections Management as Critical Museum Practice brings into focus the knowledges value systems ethics and workplace pragmatics that are foundational for this work Rather than engaging solely with cultural modifications such as Indigenous care practices the book presents local knowledge of place and material which is relevant to how collections are managed and cared for worldwide Through discussion of varied collection types management activities and professional roles contributors develop a contextualised reflexive practice for how core collections management standards are conceptualised negotiated and enacted Chapters span national museums in Brazil and Uganda to community led heritage work in Malaysia and Canada they explore complexities of numbering digitisation and description alongside the realities of climate change global pandemics and natural disasters The book offers a new definition of collections management travelling from what is done to care for collections to what is done to care for collections and their users Rather than use being an end goal it emerges as a starting point to rethink collections work
