Question For an organization with numerous servers in an on premises environment and considering migrating some of these servers to Azure with a pay as you go subscription which expenditure model is appropriate Options A Capital Expenditure CapEx B Operating Expenditure OpEx C Public Cloud D Azure Reservations Correct Answer B Operating Expenditure OpEx

Explanation When moving to a pay as you go subscription model in Azure the expenditure model transitions to Operating Expenditure OpEx In the OpEx model costs are incurred for services as they are used which is characteristic of cloud services and pay as you go plans This approach contrasts with the Capital Expenditure CapEx model which involves upfront investment in physical infrastructure and is more typical of on premises environments The shift to OpEx allows for greater flexibility and scalability as costs are based on actual usage rather than upfront investments Public cloud is a deployment model not an expenditure model Azure Reservations can provide cost savings in Azure but they are a method of payment within the OpEx model rather than a separate expenditure model Capital Expenditures or CapEx is defined as funds used allocated by organizations to obtain upgrade and maintain physical assets that are paid upfront such as data centers These expenditures are generally nonrecurring and result in the acquisition of permanent assets The Azure Reservations service is an example of a CapEx model Operating Expenditures or OpEx is defined as funds that are used by organizations for their day to day operations Think of OpEx as your electricity and water bill The more you use the higher the charges Azure on demand or pay as you go pricing is an example of an OpEx model Hence this correct answer is Operating expenditure
