In the context of life sciences we are constantly confronted with information that possesses precise semantic values and appears essentially immersed in a specific evolutionary trend In such a framework Nature appears in Monod s words as a tinkerer characterized by the presence of precise principles of self organization However while Monod was obliged to incorporate his brilliant intuitions into the framework of first order cybernetics and a theory of information with an exclusively syntactic character such as that defined by Shannon research advances in recent decades have led not only to the definition of a second order cybernetics but also to an exploration of the boundaries of semantic information As H Atlan states on a biological level the function self organizes together with its meaning Hence the need to refer to a conceptual theory of complexity and to a theory of self organization characterized in an intentional sense There is also a need to introduce at the genetic level a distinction between coder and ruler as well as the opportunity to define a real software space for natural evolution The recourse to non standard model theory the opening to a new general semantics and the innovative definition of the relationship between coder and ruler can be considered today among the most powerful theoretical tools at our disposal in order to correctly define the contours of that new conceptual revolution increasingly referred to as metabiology This book

focuses on identifying and investigating the role played by these particular theoretical tools in the development of this new scientific paradigm Nature speaks by means of mathematical forms we can observe these forms but they are at the same time inside us as they populate our organs of cognition In this context the volume highlights how metabiology appears primarily to refer to the growth itself of our instruments of participatory knowledge of the world

Epistemic Complexity and Knowledge Construction A. Carsetti, 2013-03-19 The volume as its first target aims at clarifying that peculiar entanglement of complexity causality meaning emergence and intentionality that characterises the unfolding of the natural forms of human cognition As is well known cognition is not only a self organising process It is also a co operative and coupled process If we consider the external environment as a complex multiple and stratified Source which interacts with the nervous system we can easily realise that the cognitive activities devoted to the intelligent search for the depth information living in the Source may determine the very change of the complexity conditions according to which the Source progressively expresses its wild action In this sense simulation models are not neutral or purely speculative the true cognition actually appears to be necessarily connected with successful forms of reading those forms in particular that permit a specific coherent unfolding of the deep information content of the Source Therefore the simulation models if valid materialise as creative channels i e as autonomous functional systems as the very roots of a new possible development of the entire system represented by mind and its Reality From a general point of view the objectivity of Reality is also proportionate to the autonomy reached by cognitive processes In this sense at the level of cultural evolution reference procedures act as guide mirror and canalisation with respect to primary information flows and involved selective forces they offer themselves as the actual instruments for the constant renewal of the code for the invention and the actual articulation of an ever new incompressibility From an effective point of view they appear as indissolubly linked to the successive definition of specific and innovative measures of the epistemic complexity These measures cannot concern only statistical rarity Shannon or computational incompressibility Kolmogorov Chaitin on the contrary they should also be able to take into account the coupled connection between the Source and the cognitive agent the evolution of this connection as well as the successive constitution of meaning as symbolic form Hence the possible and necessary definition of new axiomatic systems new measure spaces the real displaying of processes of continuous reorganisation at the semantic level Indeed it is only through a complete first order reduction and a correlated non standard second order analysis that new incompressibility will actually manifest itself Therefore the reference procedures appear to be related to a process of multiplication of minds as well as to a process of clarification of meanings which finally emerges as vision via principles
