<p>Answer:</p> <p>Should schools be allowed to ban mobile phones? This is a question that has been debated for many years. On the one hand, some people believe that mobile phones are a distraction and can be used for cheating. On the other hand, some people believe that mobile phones are a necessary tool for communication and learning. In this essay, I will argue that schools should be allowed to ban mobile phones.</p> <p>Firstly, mobile phones are a distraction. When a student is in class, they are often checking their phone. This can be a waste of time and can prevent them from learning. Secondly, mobile phones can be used for cheating. Students can use their phones to look up answers or to communicate with each other during an exam. This is unfair to the other students who are not cheating. Thirdly, mobile phones can be a safety hazard. If a student is using their phone while walking, they can be distracted and could get into an accident. Finally, mobile phones can be a source of social media pressure. Students can feel like they have to post photos or videos of themselves, which can lead to cyberbullying or other negative consequences.</p> <p>Therefore, I believe that schools should be allowed to ban mobile phones. This will help to reduce distractions, prevent cheating, and improve safety. It will also help to reduce the social media pressure that students feel. I think that schools should have a policy that bans mobile phones during class time and during exams. This will ensure that students are focused on their learning and that they are not using their phones for inappropriate purposes.</p>

Teaching and Learning in the Science Laboratory Dimitris Psillos, H. Niedderer, 2006-05-05 Scope of the book There is an on going debate regarding the role of labwork in science education which dates back several decades and which illustrates the conviction and interest of teachers researchers and policy makers world wide in the value of laboratory work for understanding science This is evident in more recent books and studies regarding the laboratory which mainly refer to countries with a considerable tradition in practical work in science education Woolnough Alsop 1985 Hodson 1993 Hegarthy Hazel 1990 Wellington 2000 Yet in discussing research studies on labwork several authors express their concern about its effectiveness in facilitating students understanding of various aspects of scientific inquiry They point out a comprehensive re conceptualisation of the aims of labwork and as a consequence of investigating what the students actually learn in different contexts Lazarowitz Tamir 1994 Tobin Tippins 1993 Lunetta 1998 It has also been argued that the relationship between instructional activities and student learning in labwork needs more attention than it has been given in science education research Leach Paulsen 1999 It appears that the case for research based labwork emerges in several quarters in science education particularly among researchers This book presents and discusses a variety of laboratory practices and their effectiveness The studies take into account recent theoretical developments and empirical results concerning students understanding of scientific inquiry A whole chapter is devoted to technological advances offering new learning opportunities for the students and teaching facilities for the teacher

Teaching Political Science to Undergraduates Laure Paquette, 2016-01-15 By 2020 half of the world's population and most university students will have a supercomputer in their pockets This revolution will affect the way students respond to higher education The university classroom must henceforth engage students and the classic lecture format alone might not be enough to do so This book answers the question how university students can learn in the classroom what they cannot learn in any other way The answer is inspired by options that are not available to political scientists in the way that they are in the laboratories for the sciences in the performances for the live arts and in the studios for visual arts as well as ideas that are already present but not widespread in the discipline problem solving and case studies as in the professional schools and simulation exercises in many other disciplines This book proposes therefore an active pedagogy for political science at a time when active pedagogy is more important than ever Prof Laure Paquette PhD has been a visiting researcher or professor in 23 countries She has advised several foreign governments as well as her own Canada and has published extensively in four languages This is her sixteenth book
