The Nervous System

The nervous system is an extremely complex, highly organized, and very sensitive structure that regulates all the functions of the human body. The main purpose of the nervous system is to receive information from the environment and the body, and to coordinate the response. The nervous system is divided into the central nervous system (CNS) and the peripheral nervous system (PNS).

Central Nervous System

The central nervous system (CNS) is the part of the nervous system that is located in the head and the spinal cord. It is the most complex part of the nervous system. The brain is the most complex part of the CNS, and it is located in the head. The spinal cord is the part of the CNS that is located in the spinal column. The CNS is responsible for all the functions of the body, including the control of movement, sensation, and thought.

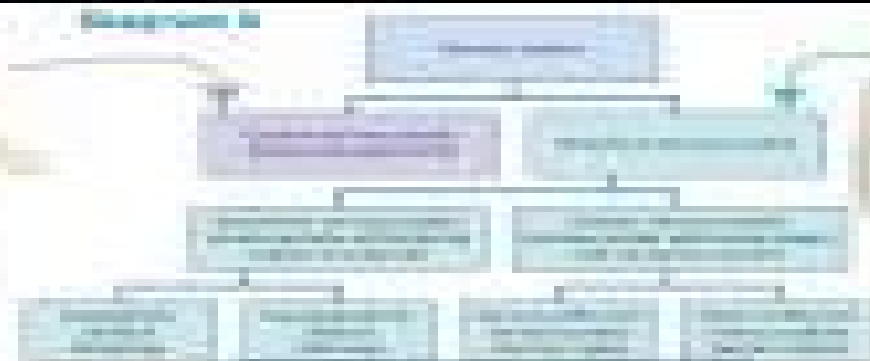

Peripheral Nervous System

The peripheral nervous system (PNS) is the part of the nervous system that is located outside the CNS. It is the part of the nervous system that is responsible for the transmission of information between the CNS and the rest of the body. The PNS is composed of all the nerves that are located outside the CNS.

The PNS is divided into the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for the control of voluntary movements, and the autonomic nervous system is responsible for the control of involuntary functions. The somatic nervous system is composed of all the nerves that are located outside the CNS and are responsible for the control of voluntary movements. The autonomic nervous system is composed of all the nerves that are located outside the CNS and are responsible for the control of involuntary functions.

The Brain

The brain is the most complex part of the nervous system. It is the part of the nervous system that is responsible for the control of all the functions of the body. The brain is located in the head and is composed of the cerebrum, cerebellum, and brainstem. The cerebrum is the largest part of the brain and is responsible for the control of voluntary movements. The cerebellum is the smallest part of the brain and is responsible for the control of involuntary functions. The brainstem is the part of the brain that is located between the cerebrum and the cerebellum and is responsible for the control of basic life functions.
