Comment your work along the way

Write a “log file” as you work. Write down explicitly what kind of measures, controls, of counterbalancing you do with your stimuli, what kind of decisions you take as the work comes along. It will ease the writing process later. Be specific and detailed. The best is a sort of journal format.

You will have forgotten most of it by the time you get the results and then it is REALLY hard to remember all those thoughts and decisions you made during the planning phase and at the beginning of the experiment. The crucial point here is that – at least in a dissertation, and in most journal publications – you have to justify and report on those decisions you made, and on the ways you measured and controlled things (e.g. stimuli, acoustic analysis, selection of participants, criteria for exclusion or inclusion of data...).

This helps also to be systematic. Let me give you an example: if you do some acoustic measurements on consonant clusters over a few weeks. On Monday, you start and set the label for the beginning of the consonant clusters (without determining exact guidelines), you do 43% of the work. The following week, on a Wednesday, you want to continue, but you are not sure anymore what were the criteria you used to set boundaries, so you do it a slightly different way without really being aware of it. Up to 90% of the work. Then, 3 weeks later, you finish it for the last 10%. But you really don't remember a thing and do it a third way. The bad news is, it might happen to interact with the reaction times of the subjects, because the time reaction measure was set from the beginning of the consonant cluster – for example. But you don't know that yet.

Now, at the end of the experiment, some strange things come out and you wonder if it has something to do with the way you set the boundary around the clusters... but you can't remember a thing of what you did, worse, you can't even remember if you did it systematically or not !! and the only way to check it is to look at each single file and try to figure your thoughts back then – ok with 10 files, but less fun with 288.... And then you think you remember the Monday way, but you don't remember which files were which.... a nightmare.

Thanks to the COVID 19 pandemic, online learning has become paramount to the continued and uninterrupted teaching of students and has forced students and teachers alike to adjust to an online learning environment. Though some have already returned to the traditional classroom or plan to very soon, others have begun to appreciate the value of online education initiatives that had previously been discussed but never acted upon as they have been in the past year. With plenty of positive and negative aspects, online learning is a complex issue with numerous factors to consider. Understanding Human Information Behavior Beth St. Jean, Ursula Gorham, Elizabeth Bonsignore, 2021-03-25. This introductory textbook aims to provide undergraduate students in information science and related disciplines with an applied grounding in information behavior. The book's primary focus is to provide explicit links between information behavior and the careers that students will pursue within the information professions. With a deeper understanding of information behavior, students will be better equipped to address the many types of barriers that frequently prevent people from effectively and efficiently accessing, understanding, managing, and/or using the information they need in the real world. The first six chapters of the book provide students with the fundamental building blocks of information behavior, introduce them to important related concepts, and provide a deep dive into information literacy, digital literacy, the digital divide, and digital inclusion. Chapters 7 through 12 introduce students to the scholarly communication system, providing guidance on how to find, read, and critically evaluate information behavior studies. Also explored in these chapters are the various methods used to investigate and understand people's information behaviors. Topics covered include research design, research methods, research ethics, user needs, assessment, and human computer interaction and associated design methods. This part of the book also covers some of the major information behavior models and theories that have been developed to describe, predict, and/or explain people's information behaviors. In chapters 13 through 16, the authors provide an in-depth look into their own information behavior research areas, including consumer health information behavior and health justice, youth information behavior, legal information behavior, and access to justice, and information behavior in libraries. In the final chapter, students are first

introduced to a wide range of careers within the information professions and then taken along on a deep dive into 10 specific jobs with a special focus on the thread of information behavior that pervades the roles and responsibilities commonly associated with these positions Each chapter begins with one or more scenarios illustrating concepts covered in the chapter and ends with discussion questions The SAGE Guide to Writing in Corrections Steven Hougland, Jennifer M. The Concise APA Handbook Paul Chamness Iida,Rachael Ruegg,Naoko Araki,Mary Frances Agnello,Mark de Boer,2017-02-01 Most students struggle with learning how to find references use them effectively and cite them appropriately in a required format One of the most common formats is that of APA The authors all teach at the same university where their current offthe shelf reference book while helpful is filled with a lot of extra information that they do not use and contains missing or incorrect information The cost of this book also continues to rise In a search for something else to meet their needs they discovered that there are no concise guides that deal with APA only that are cost effective or user friendly for students who are not familiar with using references and formatting an essay in the APA format In order to offer student writers a source of information that is concise and cost effective the authors have written this handbook to provide students with important information in clear concise user friendly language as well as to offer practical examples that will help them grasp the concept of secondary research writing Much of the published materials present the nitpicky details of APA in very technical terms that are not easy to understand This handbook presents the same information in simplified terms with images and step by step instructions in ways that will make sense to both undergraduate and graduate student writers Additionally student writers often struggle with understanding the concept of plagiarism as well as how to find sources evaluate the appropriateness of sources and use sources in effective ways e g how to integrate quotes when to paraphrase among others This book provides this information in a concise and easy to understand format
