1. A variable is a value that can change. Give an example of a variable.	Age	1
2. A constant is a value that does not change. Give an example of a constant.	10	1
3. A function is a relationship between two variables. Give an example of a function.	$y = 2x + 1$	1
4. A linear function is a function whose graph is a straight line. Give an example of a linear function.	$y = 2x + 1$	1
5. A quadratic function is a function whose graph is a parabola. Give an example of a quadratic function.	$y = x^2 + 2x + 1$	1
6. A cubic function is a function whose graph is a curve. Give an example of a cubic function.	$y = x^3 + 2x^2 + 1$	1
7. A rational function is a function whose graph is a curve with a vertical asymptote. Give an example of a rational function.	$y = \frac{1}{x}$	1
8. A trigonometric function is a function whose graph is a periodic wave. Give an example of a trigonometric function.	$y = \sin(x)$	1
9. A logarithmic function is a function whose graph is a curve that increases slowly. Give an example of a logarithmic function.	$y = \log(x)$	1
10. An exponential function is a function whose graph is a curve that increases rapidly. Give an example of an exponential function.	$y = 2^x$	1
11. A power function is a function whose graph is a curve that increases rapidly. Give an example of a power function.	$y = x^2$	1
12. A root function is a function whose graph is a curve that increases slowly. Give an example of a root function.	$y = \sqrt{x}$	1
13. A piecewise function is a function whose graph is made up of several different functions. Give an example of a piecewise function.	$y = \begin{cases} x & \text{if } x < 0 \\ x^2 & \text{if } x \geq 0 \end{cases}$	1
14. A composite function is a function that is formed by combining two or more functions. Give an example of a composite function.	$y = \sin(x^2)$	1
15. An inverse function is a function that reverses the effect of another function. Give an example of an inverse function.	$y = \frac{1}{x}$	1
16. A one-to-one function is a function where each input has exactly one output. Give an example of a one-to-one function.	$y = x$	1
17. A many-to-one function is a function where multiple inputs can have the same output. Give an example of a many-to-one function.	$y = x^2$	1
18. A one-to-many function is a function where one input has multiple outputs. Give an example of a one-to-many function.	$y = \sqrt{x}$	1
19. A many-to-many function is a function where multiple inputs have multiple outputs. Give an example of a many-to-many function.	$y = \sin(x)$	1
20. A function is said to be continuous if its graph is a single unbroken curve. Give an example of a continuous function.	$y = x^2$	1
21. A function is said to be discontinuous if its graph has a break or jump. Give an example of a discontinuous function.	$y = \frac{1}{x}$	1
22. A function is said to be increasing if its graph is always going up. Give an example of an increasing function.	$y = x^3$	1
23. A function is said to be decreasing if its graph is always going down. Give an example of a decreasing function.	$y = x^{-3}$	1
24. A function is said to be constant if its graph is a horizontal line. Give an example of a constant function.	$y = 5$	1
25. A function is said to be periodic if its graph repeats itself. Give an example of a periodic function.	$y = \sin(x)$	1

The Nature Of Science Section1 2 Worksheet Answer

Dorothy Warren

The Nature Of Science Section1 2 Worksheet Answer:

The Nature of Science Dorothy Warren,2001 There are many different approaches to science Many students in school have a view of science that is far removed from the real world practice of science and they too often consider science to be a defined body of knowledge and scientists to know all the answers Through a series of exercises this book tries to give students an awareness of the processes of science and of the nature of science as a changing body of knowledge with uncertainties and much remaining to be discovered It is hoped that by using it teachers can communicate to their students some of the wonder and excitement of science and encourage the development of future generations of scientists The Nature of Science includes a range of activities designed to look at different aspects of the nature of science and to teach investigative skills to 11 19 year old students It contains teachers notes background information photocopiable student worksheets and answers

Teaching About Evolution and the Nature of Science National Academy of Sciences,Division of Behavioral and Social Sciences and Education,Board on Science Education,Working Group on Teaching Evolution,1998-04-06 Today many school students are shielded from one of the most important concepts in modern science evolution In engaging and conversational style Teaching About Evolution and the Nature of Science provides a well structured framework for understanding and teaching evolution Written for teachers parents and community officials as well as scientists and educators this book describes how evolution reveals both the great diversity and similarity among the Earth s organisms it explores how scientists approach the question of evolution and it illustrates the nature of science as a way of knowing about the natural world In addition the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution The book includes sample activities for teaching about evolution and the nature of science For example the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution Background information materials and step by step presentations are provided for each activity In addition this volume Presents the evidence for evolution including how evolution can be observed today Explains the nature of science through a variety of examples Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction Answers frequently asked questions about evolution Teaching About Evolution and the Nature of Science builds on the 1996 National Science Education Standards released by the National Research Council and offers detailed guidance on how to evaluate and choose instructional materials that support the standards Comprehensive and practical this book brings one of today s educational challenges into focus in a balanced and reasoned discussion It will be of special interest to teachers of science school administrators and interested members of the community

History & Concepts Parent Lesson Plan ,2013-08-01 Survey of Science History Concepts Course Description Students will study four areas of science Scientific Mathematics Physics Biology and Chemistry Students will gain an appreciation for how each subject has affected our lives and for the people God revealed wisdom to as they sought to understand Creation Each content area is thoroughly explored giving students a good foundation in each discipline Semester 1 Math and Physics Numbers surround us Just try to make it through a day without using any It s impossible telephone numbers calendars volume settings shoe sizes speed limits weights street numbers microwave timers TV channels and the list goes on and on The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them It s amazing how ten simple digits can be used in an endless number of ways to benefit man The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics Physics is a branch of science that many people consider to be too complicated to understand John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend Did you know that a feather and a lump of lead will fall at the same rate in a vacuum Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space Learn about the effects of inertia first hand during fun and informative experiments Exploring the World of Physics is a great tool for student who want to have a deeper understanding of the important and interesting ways that physics affects our lives Semester 2 Biology and Chemistry The field of biology focuses on living things from the smallest microscopic protozoa to the largest mammal In this book you will read and explore the life of plants insects spiders and other arachnids life in water reptiles birds and mammals highlighting God s amazing creation You will learn about biological classification how seeds spread around the world long term storage of energy how biologists learned how the stomach digested food the plant that gave George de Mestral the idea of Velcro and so much more

For most of history biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar looking features into families. Starting in the 1990 s biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures these reveal the underlying design of creation. Exploring the World of Biology is a fascinating look at life from the smallest proteins and spores to the complex life systems of humans and animals. Chemistry is an amazing branch of science that affects us every day yet few people realize it or even give it much thought. Without chemistry there would be nothing made of plastic there would be no rubber tires no tin cans no televisions no microwave ovens or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. Exploring the World of Chemistry brings science to life and is a wonderful learning tool with many illustrations and biographical information.

Applied Science Studies of God s Design in Nature Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student. Materials for each semester are independent of one another to allow flexibility. Made in Heaven Science shamelessly steals from God s creation yet refuses to give God the glory. Discover how the glow of a cat s eyes innovates road reflectors the naturally sticky inspirations for Velcro and barbed wire as well as a fly s ear the lizard s foot the moth s eye and other natural examples are inspiring improvements and new technologies in our lives. Engineers and inventors have long examined God s creation to understand and copy complex proven mechanics of design in the science known as biomimicry. Much of this inspiration is increasingly drawn from amazing aspects of nature including insects to plants to man in search of wisdom and insight. We are surrounded daily by scientific advancements that have become everyday items simply because man is copying from God s incredible creation without acknowledging the Creator. Champions of Invention The great minds of the past are still with us today in many ways. Individuals who explored the natural world hundreds and thousands of years ago have given us a treasure of knowledge in all the sciences. In this exciting series from educator author John Hudson Tiner short biographies of the world s most gifted thinkers will inspire the leaders of tomorrow. Study the life of the forgotten inventor Joseph Henry whose exploration of electricity set the standard for later innovators. Find out how a personal tragedy paved the way for Samuel F B Morse to put aside his painting and develop the telegraph. These valuable learning guides will give students accurate accounts of lives from the halls of science and explain what those scientists believed about the world around them. Discovery of Design From the frontiers of scientific discovery researchers are now taking design elements from the natural world and creating extraordinary breakthroughs that benefit our health our

quality of life and our ability to communicate and even help us work more efficiently An exciting look at cutting edge scientific advances Discovery of Design highlights incredible examples that include How things like batteries human organ repair microlenses automotive engineering paint and even credit card security all have links to natural designs Innovations like solar panels in space unfurled using technology gleaned from beech tree leaves and optic research rooted in the photonic properties of opal gemstones Current and future research from the fields of stealth technology communications cosmetics nanotechnology surveillance and more Take a fantastic journey into the intersection of science and God s blueprints for life discovering answers to some of the most intricate challenges we face in a multi purpose educational supplement **Educart**

Scope of the book There is an on going debate regarding the role of labwork in science education which dates back several decades and which illustrates the conviction and interest of teachers researchers and policy makers world wide in the value of laboratory work for understanding science This is evident in more recent books and studies regarding the laboratory which mainly refer to countries with a considerable tradition in practical work in science education Woolnough Alsop 1985 Hodson 1993 Hegarthy Hazel 1990 Wellington 2000 Yet in discussing research studies on labwork several authors express

their concern about its effectiveness in facilitating students understanding of various aspects of scientific inquiry They point out a comprehensive re conceptualisation of the aims of labwork and as a consequence of investigating what the students actually learn in different contexts Lazarowitz Tamir 1994 Tobin Tippins 1993 Lunetta 1998 It has also been argued that the relationship between instructional activities and student learning in labwork needs more attention than it has been given in science education research Leach Paulsen 1999 It appears that the case for research based labwork emerges in several quarters in science education particularly among researchers This book presents and discusses a variety of laboratory practices and their effectiveness The studies take into account recent theoretical developments and empirical results concerning students understanding of scientific inquiry A whole chapter is devoted to technological advances offering new learning opportunities for the students and teaching facilities for the teacher
