Exam 2023

How many different types of molecules are shown in Model 1? - ANSWER two: circle and triangle

Number of triangles and circles on each side of membrane? - ANSWER 14 triangles on left: 0 triangles on right

12 circles on left: 13 circles on right

Which shape is larger? - ANSWER triangle

Describe direction of movement of molecules in Model 1. - ANSWER Random-all directions

Which molecules are able to pass through the semi-permeable membrane? - ANSWER Circles can fit through the gaps due to small size and are nearly equally distributed on both sides of the membrane.

Would you expect the Model 1 system to change over time? - ANSWER No. The triangles will remain on the left side because they are too big to pass through membrane. Circles will remain evenly distributed on both sides due to size and random movement.

What two major types of biological molecules compose the majority of the cell membrane in Model 2? - ANSWER Phospholipids and membrane spanning proteins.

How many different protein molecules are found in Model 2? - ANSWER Four. Two small surface proteins and 2 membrane spanning proteins.

What is the difference between the position of the surface proteins and the membrane-spanning proteins? - ANSWER Surface proteins do not span the cell membrane.

When a carbohydrate chain is attached to a protein, what is the structure called? - ANSWER Glycoprotein; glyco = carbohydrate

When a carbohydrate is attached to a phospholipid, what is the structure called? - ANSWER Glycolipid

Cell Boundaries Stephen White, Gunnar von Heijne, Donald Engelman, 2021-12-31 The central themes of Cell Boundaries concern the structural and organizational principles underlying cell membranes and how these principles enable function By building a biological and biophysical foundation for understanding the organization of lipids in bilayers and the folding assembly stability and function of membrane proteins the book aims to broaden the knowledge of bioscience students to include the basic physics and physical chemistry that inform us about membranes In doing so it is hoped that physics students will find familiar territory that will lead them to an interest in biology Our progress toward understanding membranes and membrane proteins depends strongly upon the concerted use of both biology and physics It is important for students to know not only what we know but how we have come to know it so Cell Boundaries endeavours to bring out the history behind the central discoveries especially in the early chapters where the foundation is laid for later chapters Science is far more interesting if as students we can appreciate and share in the adventures and misadventures of discovering new scientific knowledge Cell Boundaries was

written with advanced undergraduates and beginning graduate students in the biological and physical sciences in mind though this textbook will likely have appeal to researchers and other academics as well Highlights the history of important central discoveries Early chapters lay the foundation for later chapters to build on so knowledge is amassed High quality line diagrams illustrate key concepts and illuminate molecular mechanisms Box features and spreads expand on topics in main text including histories of discoveries special techniques and applications

Control of Membrane Function: short-term and long-term J.M. Ritchie, P. Magistretti, L. Bolis, 2012-12-02 A critical factor in cell to cell interactions is the presence in the cell membrane of highly specific ion channels controlled by specific receptors that are bound to and activated by a gamut of external hormones and neurotransmitters Through both this action on ion channels and action on other membrane components such as G proteins extracellular signals alter intracellular events usually through the mediation of second messengers and so provide the basis for the transduction mechanism connecting extracellular signals with intracellular effectors This volume deals with the various ways that such membrane function is controlled

Membrane Shape and Biological Function José Carlos Bozelli (Jr.),Richard M. Epand,2024-11 For a long time the main function ascribed to biological membranes was that of being a semi permeable barrier defining and determining the boundaries between cells and organelles However this view has changed The number of reported essential functions in cell biology ascribed to biological membranes has increased markedly Indeed a variety of biological processes rely on the fine tuned interaction between the membrane and its microenvironment The functioning of biological membranes is a consequence of the chemical structure and physical properties of the component molecules and their mixtures One physical property of membranes is their shape The concept of shape is intimately associated with properties of curvature but curvature and shape are not necessarily identical While the role of membrane shape in biological processes was believed to be a passive one new findings have challenged this view Membrane shape and shape changes are active ways for the membrane to trigger biological responses Hence the coupling between membrane shape and biological function represents a modern aspect of the function of biological membranes This multidisciplinary book presents state of the art discussions on membrane shape and its relation to biological processes at the intersection of medicine physics chemistry and biology The book includes fundamentals of membrane shape generation and recognition In addition there are chapters that emphasize methods to measure aspects of membrane shape as well as giving specific examples of biological phenomenon that depend on membrane shape with a discussion of the mechanism by which shape determines biological function The book encompasses theoretical and experimental aspects with examples using model systems and cellular ones The importance of membrane shape in determining biological function is a relatively new concept that has been rapidly developing in the past several years highlighting the timely importance of this book
