Reproductive Biotechnology in Finfish Aquaculture C.-S. Lee, E.M. Donaldson, 2012-12-02 The successful reproduction of cultured brood stock is essential to the sustainable aquaculture of aquatic organisms This book describes recent advances in the field of finfish reproductive biotechnology The chapters in this volume are written by eminent scientists who review the progress and assess the status of biotechnology research that is applicable to the reproduction of finfish species for aquaculture A wide range of topics is included starting with broodstock technologies such as broodstock genetics broodstock nutrition environmental control of maturation and impacts of stress on broodstock gametes and progeny The volume includes technologies for induction of ovulation and spermiation using synthetic hypothalamic peptides Gamete

technologies which are described include cryopreservation chromosome set manipulation disease prevention and control for gametes and embryos and the development of transgenic fish with enhanced production characteristics Genetic and endocrine technologies for the production of monosex male and female fish stocks are also described The closing chapter summarizes the discussion of each topic at the workshop provides recommendations to industry and describes priorities of research and development Researchers as well as teaching faculty in the aquaculture field will find this volume of great value

The Senses of Fish Gerhard von der Emde, Joachim Mogdans, B.G. Kapoor, 2012-12-06 Fish comprise more than 50% of all living vertebrates and are found in a wide range of highly diverse habitats like the deep sea the shoreline tide pools tropical streams and sweetwater ponds During evolution the senses of fish have adapted to the physical conditions of the environment in which different species live As a result the senses of fish exhibit a remarkable diversity that allows different species to deal with the physical constraints imposed by their habitat In addition fish have evolved several new sensory systems that are unique to the aquatic environment In this book examples of adaptation and refinement are given for six sensory systems The visual system The auditory system The olfactory system The mechanosensory lateral line system The taste system The electrosensory system In each case the environmental conditions under which a particular group of fish lives are analyzed This is followed by a description of morphology and physiology of the sensory system and by an evaluation of its perceptual capabilities Finally the sensory adaptations to the particular conditions that prevail in the habitat of a species are highlighted The various examples from different groups of fish presented in this book demonstrate the impressive capability of fish sensory systems to effectively overcome physical problems imposed by the environment *Paddlefish Aquaculture* Steven D. Mims, William L. Shelton, 2015-06-29 Paddlefish have become of increasing interest to the aquaculture community in recent years particularly as a potential new source of seafood and caviar Native to North America paddlefish show great promise both domestically and internationally as a commercially viable farmed species Paddlefish Aquaculture examines all aspects of the biology and culture of these fish exploring their physiology production end products and the economics underlying a successful paddlefish operation Chapters specifically cover paddlefish biology propagation and early culture techniques production for meat and caviar international culture and history paddlefish food products bioaccumulants of contaminants in paddlefish parasites and diseases and the economics of paddlefish aquaculture Paddlefish Aquaculture is a timely practical reference for researchers and producers interested in paddlefish *Sturgeon biodiversity and conservation* Vadim J.
