Spectroscopy of Semiconductors Wei Lu, Ying Fu, 2018-07-31 The science and technology related to semiconductors have received significant attention for applications in various fields including microelectronics nanophotonics and biotechnologies Understanding of semiconductors has advanced to such a level that we are now able to design novel system complexes before we go for the proof of principle experimental demonstration This book explains the experimental setups for optical spectral analysis of semiconductors and describes the experimental methods and the basic quantum mechanical principles underlying the fast developing nanotechnology for semiconductors Further it uses numerous case studies with detailed theoretical discussions and calculations to demonstrate the data analysis Covering structures ranging from bulk to the nanoscale it examines applications in the semiconductor industry and biomedicine Starting from the most basic physics of geometric optics wave optics quantum mechanics solid state physics it provides a self contained resource on the subject for university undergraduates The book can be further used as a toolbox for researching and developing semiconductor nanotechnology based on spectroscopy

Matter and Mathematics Andrew Younan, 2022-11-11 To borrow a phrase from Galileo What does it mean that the story of the creation is written in the language of mathematics This book is an attempt to understand the natural world its consistency and the ontology of what we call laws of nature with a special focus on their mathematical expression It does this by arguing in favor of the Essentialist interpretation over that of the Humean and Anti Humean accounts It re examines and critiques Descartes notion of laws of nature following from God s activity in the world

as mover of extended bodies as well as Hume's arguments against causality and induction. It then presents an Aristotelian Thomistic account of laws of nature based on mathematical abstraction, necessity and teleology, finally offering a definition for laws of nature within this framework.
