esotericism can be rethought through broader engagement with neighboring fields

Ferroptosis: Intersections, Implications, and Innovations in Programmed Cell Death Patrice X. Petit, Bilal Çiğ, Juan Carlos Mayo, 2025-08-08 Ferroptosis a form of regulated cell death driven by iron dependent lipid peroxidation has emerged as a critical mechanism governing a myriad of pathophysiological conditions Firstly identified in cancer cells the process of ferroptosis has since been implicated in various disease states including neurodegeneration kidney damage cutaneous and cardiovascular diseases The identification and understanding of ferroptosis have revolutionized our perception of cell death and survival unraveling new potential therapeutic targets and strategies Yet

despite the progress made crucial gaps in our knowledge persist How exactly does ferroptosis intersect with other types of cell death What are the specific markers and effectors of ferroptosis in different cell types How can we precisely manipulate ferroptosis in cellular models and what anticipations can we build from such experiments regarding possible therapeutics This Research Topic aims to collect the latest advances in our understanding of ferroptosis and seeks to increase our knowledge of the cellular and molecular machinery behind this form of programmed cell death It will probe into the links between ferroptosis and other forms of cell death its regulation and manipulation for potential therapeutic advantage as well as its role in various pathophysiological conditions **The People and the State** P.A.J.
