Learning Classifier Systems Larry Bull, 2012-08-13 The field called Learning Classifier Systems is populated with romantics Why shouldn't it be possible for computer programs to adapt learn and develop while interacting with their environments In particular why not systems that like organic populations contain competing perhaps cooperating entities evolving together John Holland was one of the earliest scientists with this vision at a time when so called artificial intelligence was in its infancy and mainly concerned with preprogrammed systems that didn't learn that like organisms had sensors took Instead Holland envisaged systems actions and had rich self generated internal structure and processing In so doing he foresaw and his work prefigured such present day domains as reinforcement learning and embedded agents that are now displacing the older standard At One focus was what Holland called classifier systems sets of competing rule like classifiers each a hypothesis as to how best to react to some aspect of the environment or to another rule The system embracing such a rule population would explore its available actions and responses rewarding and rating the active rules accordingly Then good classifiers would be selected and reproduced mutated and even crossed à la Darwin and genetics steadily and reliably increasing the system's ability to cope
