Universal Gravitation PhET Lab
Simulations at [Gravity Force Lab](#)

Introduction

Every object around you is attracted to you. In fact, every object in the galaxy is attracted to every other object in the galaxy. Newton postulated and Cavendish confirmed that all objects with mass are attracted to all other objects with mass by a force that is proportional to their masses and inversely proportional to the square of the distance between the objects' centers. This relationship became *Newton's Law of Universal Gravitation*. In this simulation, you will look at two massive objects and their gravitational force between them to observe G , the constant of universal gravity that Cavendish investigated.

Important Formulas

$$F = G \frac{m_1 m_2}{d^2}$$

$$F_c = m a_c$$

$$Q_c = \frac{v^2}{r}$$

Procedure *PhET Simulations* *Play with the Sims* *Physics* *Gravity*

1. Take some time and familiarize yourself with the simulation. Notice how forces change as mass changes and as distance changes.
2. Fill out the chart below for various objects at various distances.
3. Solve for the universal gravitation constant, G and compare it to published values.
