**Sustainability of Southern African Ecosystems under Global Change** Graham P. von Maltitz, Guy F.

Midgley, Jennifer Veitch, Christian Brümmer, Reimund P. Rötter, Finn A. Viehberg, Maik Veste, 2024-01-05 This open access

book about the sustainability of marine and terrestrial ecosystems in southern Africa provides a synthesis of the research program Science Partnerships for the Adaptation to Complex Earth System Processes SPACES II 2018-2022. It addresses the scientific, social, and economic issues related to climate change, its potential impacts on the various ecosystems, adaptations, and management interventions for enhancing systems resilience in Southern Africa. It is written by numerous scientists from African states and Germany and summarizes the latest research findings, which are of great relevance for a better understanding of climate change impacts, adaptations, and vulnerabilities, as well as for developing management options and policy options to reduce the associated risks. This is crucial considering that the projected African population increase is exceptional. Furthermore, climate change is assumed to hit southern Africa extremely hard, with a significant increase in extreme events and the frequency of severe droughts, heat waves, and flooding. Southern Africa hosts a high variety of ecosystems, which belongs to important biodiversity hotspots for unique flora and fauna. The surrounding oceans, in turn, form a bottle neck within the ocean's global thermohaline circulation, act as a still poorly understood carbon sink and source, and play an important role for fisheries as they are highly productive. Considering these important aspects, the book is an important interdisciplinary contribution to the scientific literature and will find a wide readership. The book is aimed at students, teachers, and scientists in the fields of terrestrial and marine ecology, environmental nature and landscape planning, agriculture, environmental and resource management, biodiversity, and nature conservation, as well as scientists and representatives in specialised authorities and associations, nature conservationists, and policy makers of related disciplines.

Minorities, Scarcity and Conflict Antonio Montañés Jiménez, Camila Ferreira Marinelli, Stavroula Pipyrrou, 2025-07-17. This volume places scarcity as a defining aspect of minorities' experience and as a tool to comprehend ongoing and unresolved societal friction and global environmental challenges, strategies for survival and reproduction of the status quo, and aspirational desires for social mobility. The book is an experimental collective intellectual project departing from conventional approaches to scarcity solely as a resource-based economic or demographic concept. Boldly, the book looks at the ways in which disadvantaged social groups navigate their lives through scarcity and how these circumstances are endured, interpreted, accepted, or challenged. In a thought-provoking turn, the book makes a novel contribution to minority studies by engaging with scarcity not only concerning resources but also emotion, memory, and affect. In analysing scarcity as a multidimensional analytical framework and interrogating it from manifold angles, the book unpacks uncharted ramifications of debates around scarcity and opens new lines of enquiry. The collection will be a valuable resource for academics, researchers, and policymakers working in the areas of law, political anthropology, and sociology.

Encyclopedia of Stateless Nations James B. Minahan, 2016-08-01.
