1

Section Review: In this section you learned that our best understanding of the evolutionary relationships between vertebrate groups can be shown as a _____ tree. In divergent evolution, related evolutionary lines become more _____ as they are subjected to different forces of natural selection. Divergent evolution is also known as _____. In convergent evolution, evolutionary lines that are subjected to similar forces of natural selection become more _____ to one another as they evolve.

Ectotherms must obtain the heat they need from their _____. They typically rely primarily on _____ to regulate their body temperature. Endotherms generate all the heat they need through _____ activity. They typically rely on physiological mechanisms to regulate their body temperature. They also use a number of _____ to prevent overheating.
