**Planet Aqua** Jeremy Rifkin, 2024-07-09 What would happen if we were to awaken one day and suddenly realize that the world we live in appeared eerily alien as if we d been teleported to some other distant world That frightening prospect is now Our planetary hydrosphere which animates all of life on Earth is rebelling in the wake of a global warming climate spurring biblical spring floods devastating summer droughts heatwaves and wildfires and powerful autumn hurricanes and typhoons wreaking havoc on ecosystems and society For too long we have misjudged the very nature of our existence and to what we owe our lifeline We have come to believe that we live on a land planet when the reality is that we live on a water planet and now the Earth s hydrosphere is rewilding in the throes of a changing climate taking our species and our fellow creatures into a mass extinction event as it searches for a new equilibrium Jeremy Rifkin calls on us to rethink our place in the universe and realize that we live on Planet Aqua He takes us on a new journey into the future where we will need to reassess every aspect of the way we live how we engage nature govern society conceptualize economic life educate our children and even orient ourselves in time and space The next stage in the human journey is to rebrand our home Planet Aqua and learn how to readapt to the waters of life Underpinned by robust research this major new work by one of the world

s leading public intellectuals aims to redefine the very core of our existence on Planet Aqua      **Nonfiction Reading Power**

Rhodes,2012-06-10 It s impossible to grasp the whole planet or integrate all the descriptions of it But because we live here we have to try This is not just an artistic compulsion or an existential yearning still less an academic exercise It s a survival issue This is the only planet we have We re stuck here and we don t own the place it would be the height of arrogance to assume that we do We re tenants here not owners but we re tenants with hope for a long term tenancy We want to extend our lease just as far as we can from Earth A Tenant s Manual In *Earth A Tenant s Manual* the distinguished geologist Frank H T Rhodes President Emeritus of Cornell University provides a sweeping accessible and deeply informed guide to the home we all share showing us how we might best preserve the Earth s livability for ourselves and future generations Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life He emphasizes the changes that are of concern to us today from earthquakes to climate change and the clashes over the energy resources needed for the Earth s exploding population He concludes with an extended exploration of humanity s prospects on a complex protean and ultimately finite world It is not a question of whether the planet is sustainable the challenge facing life on Earth and the life of the Earth is whether an expanding and high consumption species like ours is sustainable Only new resources new priorities new policies and most of all new knowledge can reverse the damage that humanity is doing to our home and ourselves A sustainable human future Rhodes concludes in this eloquent sobering but ultimately optimistic book will require a sense of responsible stewardship for we are not owners of this planet we are tenants Surveying the systems large and small that govern Earth s processes and influence its changes Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs or at least limit further damage to our home      *Science Matters Module 4* ,2002      **Quarterly Bulletin of the Providence Public Library** Providence Public Library (R.I.),1916      **Earth's Waters: Teacher's ed** ,2005      *Environmental Management: Issues and Concerns in Developing Countries* Pradip K. Sikdar,2021-03-17 This book deals with issues and concerns for the human environment in the developing countries incorporating natural processes and systems pollution removal technology energy conservation environmental impact assessment process economics culture political structure and societal equity from a management point of view Solutions to the emerging problems of the environment need a paradigmatic shift in approach from a process based model to a socio political economic model Hence environmental management should involve equality and control over use of the finite natural resources and the balance between Earth s biocapacity and humanity s ecological footprint Changes such

as green technologies human population stabilization and adoption of ecologically harmonious lifestyles are absolutely essential and will require redesigning of political institutions policies and revisiting forgotten skills of sustainable practices of environmental management These challenges should centre on environment governance using the concepts of common property equity and security This book is relevant for academics professionals administrators and policy makers who are concerned with various aspects of environment management and governance
