**Early Childhood and Neuroscience - Links to Development and Learning** Leslie Haley Wasserman,Debby Zambo,2013-06-03 Information from neuroscience is growing

and being properly used and misused which makes it imperative that educators receive accurate and practical information. This book provides the accurate and practical information educators pre service and in service and caregivers serving children birth through age 8 need to know. This volume takes a practical and cautionary stance. It reminds educators to consider the ethical implications of neuroscience when it is applied to education, reviews current findings from neuroscience and reveals the dangers of oversimplification and inappropriate extensions of neuroscience into curricula. It brings together a group of authors with varied expertise writing on an array of inter related educational topics that will help educators use neuroscience to understand and address the cognitive, emotional, social and behavioral needs of all young children including those with exceptionalities. They believe neuroscience can be insightful and useful to educators if applied ethically and with care. The book offers strategies educators and caregivers can use to affect children today and the adults they can become.

**Constraints of Agency** Craig W. Gruber, Matthew G. Clark, Sven Hroar Klempe, Jaan Valsiner, 2014-11-03. This book explores the basic concept of agency and develops it further in psychology using it to better understand and explain psychological processes and behavior. More importantly, this book seeks to put an emphasis on the role of agency in four distinct settings: history of psychology, neuroscience, psychology of religion, and sociocultural theories of co agency. In Volume 12 of the *Annals of Theoretical Psychology*, the contributors explore a number of new ways to look at agency in psychology. This volume seeks to develop a systematic theory of axioms for agency. It describes implications for research and practice that are founded on an understanding of the person as an actor in the world. This book also has implications for research and practice across psychology's sub fields, uniting the discipline through an agentic view of the person. *Neuroethics and Nonhuman Animals* L. Syd M. Johnson, Andrew Fenton, Adam Shriver, 2020-03-06. This edited volume represents a unique addition to the available literature on animal ethics, animal studies, and neuroethics. Its goal is to expand discussions on animal ethics and neuroethics by weaving together different threads: philosophy of mind and animal minds, neuroscientific study of animal minds and animal ethics. Neuroethical questions concerning animals' moral status, animal minds and consciousness, animal pain, and the adequacy of animal models for neuropsychiatric disease have long been topics of debate in philosophy and ethics and more recently also in neuroscientific research. The book presents a transdisciplinary blend of voices underscoring different perspectives on the broad questions of how neuroscience can contribute to our understanding of nonhuman minds and on debates over the moral status of nonhuman animals. All chapters were written by outstanding scholars in philosophy, neuroscience, animal behavior, biology, neuroethics, and bioethics and cover a range of issues and species taxa. Given its scope, the book will appeal to scientists and students interested in the debate on animal ethics while also offering an important resource for future researchers. Chapter 13 is available open access under a CC BY 4.0 license at [link.springer.com](https://link.springer.com). *Help! My Child's Anxiety is Giving Me Anxiety* Saskia Joss, 2025-04-24.
