Wang,Jianping Tao,Asad Shabbir,Wei Xue,Fei-Hai Yu,Fang-Li Luo,2024-09-02 The Anthropocene with the ongoing global changes in climate land use acidity and content of toxins represents the greatest recent challenges for plants Clonal plants mainly reproduce vegetatively asexually and offspring remain attached to the parent at least until establishment Despite limited gene recombination and genetic diversity clonal plants are widely distributed and play significant roles in various ecosystems worldwide Clonal traits such as resource sharing and signaling between connected ramets selective positioning of ramets reallocation of stored energy nutrients between connected ramets initiation of meristem banks in response to clonal integration and trade offs between clonal and sexual reproduction might help clonal plants adapt to different environmental conditions The expression fitness effects and evolution of clonal traits can be influenced by environmental changes which can be efficiently inherited and affects offspring performance i e clonal parental effect These adaptations may contribute to the survival competition invasiveness and spread of clonal species in response to global climate change in the Anthropocene from individuals to ecosystems Understanding the capacity of clonal species to survive and adjust to changing environments is requisite but limited Specifically the unique traits of clonal plants have been underestimated and their contribution to population community and ecosystem dynamics is unclear The roles of clonality in ecosystem functioning e g

carbon storage carbon nitrogen and phosphorus cycling water and soil conservation and water purification need to be further explored The contribution of clonal growth in plant invasiveness and community invisibility also needs to be addressed Hence there is an urgent need for more in depth studies investigating the adaptation and evolution mechanisms functioning and approaches of plant clonality to global change and invasiveness at different levels *The Publishers' Trade List Annual*,1917 Plant Diversity Patterns and Drivers Qing Zhang,Gang Feng ,Jinliang Liu,2024-09-20 Biodiversity can provide a series of important ecosystem functions and ecosystem services which meet the needs of human beings Plants are the biological group with the highest carbon content on earth their diversity has attracted increased attention The interpretation of plant diversity patterns and drivers is crucial for the conservation and utilization of plant resources and is also one of the hot topics in plant science and ecology There are already many studies on the patterns and drivers of plant diversity including different diversity dimensions e g taxonomic phylogenetic and functional diversity and spatial scales different plots sites watershed country continent and globe The mechanisms underlying plant diversity patterns are also quite complex For example many hypotheses are related to contemporary climate and soil conditions with temperature precipitation and soil nutrient being the most discussed drivers In addition paleoclimate and geological events may also have a strong legacy on current plant diversity patterns Except for these natural factors many anthropogenic activities including agriculture deforestation grazing urbanization and coal mining are also important drivers of plant diversity These anthropogenic activities can affect plant diversity patterns not only directly but also indirectly through their effects on habitat loss and habitat fragmentation Therefore the current plant diversity patterns are the result of many interacting factors and need to be interpreted from a more comprehensive perspective This Research Topic will therefore provide a platform for sufficient communication aiming to integrate the research from different fields and deepen the understanding of the patterns and drivers of plant diversity We encourage the submission of theoretical and experimental studies on different plant groups such as seed plants ferns mosses and algae Studies based on new methods and technology such as genomics and drones are also welcomed We welcome the following specific topics Effects of historical factors such as paleoclimate geological events on plant diversity Plant diversity that driven by contemporary climate and anthropogenic activities The effect of habitat loss and fragmentation on plant diversity New methods of research on the patterns and drivers of plant diversity **Plant Diversity and Biomass Dynamics under Environmental Variation** Arshad Ali,2023-04-25 *Library of Congress Catalog: Motion Pictures and Filmstrips* Library of Congress,1968
