1. What happens to the normal force as the angle of an inclined plane increases?

As the angle is increased, the acceleration of the object is increased. The explanation of this relates to the components that we have been drawing. As the angle increases, the component of force parallel to the incline increases and the component of force perpendicular to the incline decreases.

2. A force of 40 N is applied due east and at the same time another force of 8 N is applied due west. What is the resultant force?

32 east

3. Forces are **vector** quantities since they have magnitude and direction.

4.

Using the diagram above to find the mass of the object?

8.1 kg

5.

Using the diagram above calculate the acceleration?
