

Respiratory System

- Divided into and Upper & Lower Respiratory Tract

Function:

- Brings O₂ into the body
- Gas exchange
- Expels CO₂ & other waste product.

Protective Features of the URT:

- **Hair:** filters the air
- **Goblet Cells:** Produces mucus to trap material
- **Cilia:** Moves trapped material towards the throat for swallowing
- Blood supply close to the surface warms air and adds humidity to improve gas exchange
- **Cough Reflex:** Causes air to be pushed through the bronchial tree with high pressure, clearing the airway.
- **Sneeze Reflex:** Nasal cavity forces materials directly out of the body.

• Lower Respiratory Tract:

- "Functional" Unit of the lungs
- Gas exchange occurs in the Alveoli. Alveolar sac holds the gas, allowing the necessary O₂ to diffuse across the membrane.

• Components of Respiratory Membrane & Gas Exchange:

- Capillary Endothelium
- Capillary Basement Membrane
- Interstitial Space
- Alveolar Basement Membrane
- Alveolar Epithelium
- Surfactant Layer: Keeps alveoli from collapsing after exhalation and makes breathing easy.

• Respiration depends on both the Sympathetic and Parasympathetic Systems:

- **Parasympathetic System:** Stimulates diaphragm contraction and inspiration
- **Sympathetic System:** Increase rates & depth of respiration and dilation of the Bronchi.
- **Vagal Nerve:** Stimulation leads to Bronchoconstriction: Supports exhalation

Critical Care Study Guide Gerard J. Criner, Gilbert E. D'Alonzo, 2013-03-09 Critical care medicine is a dynamic and exciting arena where complex pathophysiologic states requiring extensive knowledge and clinical acumen are commonly found Caring for critically ill patients requires an extensive knowledge of basic pathophysiology as well as awareness of the appropriate diagnostic tests and therapeutic interventions Because this knowledge base crosses many different disciplines introduction to caring for the intensive care patient while exciting may also be intimidating This textbook is designed toward making the dynamic environment of the critical care unit understandable and the approach to the patient both logical and successful The book contains three components 1 description of the procedural tasks commonly performed for the critically ill patient 2 explanation of the most common pathophysiologic states encountered and 3 description of specific disease entities with details of their differential diagnosis diagnostic strategy and therapeutic plan This book also uses several educational approaches that we have found useful in our own teaching sessions and prior textbooks Clinical cases introduce chapters and highlight chapter segments to emphasize clinical relevancy As an additional study aid margin notes highlight important teaching points and facilitate easy review of chapter content To consolidate the principles outlined in each chapter

review questions with full text explanations are provided at the end of each chapter. All these elements help reinforce the most important messages for the reader.

Decoding **Study Guide For Pharmacology For Respiratory Care**: Revealing the Captivating Potential of Verbal Expression

In a period characterized by interconnectedness and an insatiable thirst for knowledge, the captivating potential of verbal expression has emerged as a formidable force. Its power to evoke sentiments, stimulate introspection, and incite profound transformations is genuinely awe-inspiring. Within the pages of "**Study Guide For Pharmacology For Respiratory Care**," a mesmerizing literary creation penned by a celebrated wordsmith, readers attempt an enlightening odyssey, unraveling the intricate significance of language and its enduring impact on our lives. In this appraisal, we shall explore the book's central themes, evaluate its distinctive writing style, and gauge its pervasive influence on the hearts and minds of its readership.
