

In-service Inspection

Inspection is a critical part of the maintenance program for any crane. It is the only way to ensure that the crane is in good working order and that it is safe to use. The inspection should be performed by a qualified person who is familiar with the crane and its components. The inspection should be performed at regular intervals, as specified in the manufacturer's instructions. The inspection should cover all parts of the crane, including the structure, the hoist, the trolley, the hook, and the controls. The inspection should also include a check of the crane's safety features, such as the limit switches, the emergency stop, and the anti-collision device. If any defects are found, they should be repaired immediately. If the crane is found to be unsafe, it should be taken out of service until it is repaired.

Applicable to all types of lifting equipment, this section covers the requirements for inspection and testing of lifting equipment. It includes details of the inspection and testing procedures, the frequency of inspection and testing, and the responsibilities of the person responsible for the inspection and testing. It also includes details of the record keeping requirements for inspection and testing.
