

About SKF:

SKF OFFERS MORE THAN QUALITY BEARINGS

Product quality is just one of the factors that determine bearing service life. Operating environment, proper installation and maintenance are also critical to bearing performance.

SKF controls bearing quality by using the highest grade raw materials and employing the latest production techniques and statistical process control.

As a motor rebuilder, you control operating environment, installation, and, in some cases, maintenance. SKF can provide you and your shop members with the expertise needed to control these factors and increase the service life of the bearings and your rebuilt motors.

Controlling these factors will:

- Decrease bearing problems identified during bench test
- Reduce costly warranty claims
- Increase motor service life
- Add value to the services you provide your customers

Special training programs, including the new P.R.E.P. (Partnering with Rebuilders for Enhanced Productivity) program, offer everything from basic bearing tips to the in-depth, hands-on training that leads to SKF Certification.

The following pages include the SKF bearing product most commonly used in electric motors, including ball bearings, angular contact ball bearings, spherical and cylindrical roller bearings. SKF also provides special application needs, such as INSOCOAT™ electrically insulated rolling bearings and hybrid bearings.

For additional product information, or information about SKF Certification and technical services, contact your local EIS representative.
