

What are neural networks

- Neural networks use many nodes (neurons) connected by edges (axons, dendrites) to transform an input into a desired output
- The neurons and their edges are adjusted, frequently using gradual changes to *train* the neural network.
- Neural networks can be trained many ways
 - Actor / Critic Learning
 - external reinforcement
 - Hebbian Learning (association)
 - Internal reinforcement
 - Linear Algebra (closed form solution)
- We tend to use gradient descent like learning to make incremental changes over time.
- We can introduce Boltzmann like mechanisms in some networks

The emphasis is placed on a deep understanding of the neural network techniques which has been presented in a mostly heuristic and intuitive manner. This approach will enable the reader to understand the working efficiency and shortcomings of each neural network technique for solving differential equations. The objective of this book is to provide the reader with a sound understanding of the foundations of neural networks and a comprehensive introduction to neural network methods for solving differential equations together with recent developments in the techniques and their applications. The book comprises four major sections. Section I consists of a brief overview of differential equations and the relevant physical problems arising in science and engineering. Section II illustrates the history of neural networks starting from their beginnings in the 1940s through to the renewed interest of the 1980s. A general introduction to neural networks and learning technologies is presented in Section III. This section also includes the description of the

multilayer perceptron and its learning methods In Section IV the different neural network methods for solving differential equations are introduced including discussion of the most recent developments in the field Advanced students and researchers in mathematics computer science and various disciplines in science and engineering will find this book a valuable reference source

The Numerical Solution of Neural Network Training Problems S. Saarinen,R. Bramley,George Cybenko,1991 The analysis and experimental results in this paper lead to the conclusion that many network training problems are ill conditioned and may not be solved more efficiently by higher order optimization methods While our analyses are for completely connected networks they extend to networks with sparse connectivity as well Our results suggest that neural networks can have considerable redundancy in parameterizing the function space in a neighborhood of a local minimum independently of whether or not the solution has a small residual
