Quantifying Spatial Uncertainty in Natural Resources H. Todd Mowrer, Russell G. Congalton, 2000-03-01 This book will be useful both to those new to spatial uncertainty assessment and to experienced practitioners

Environmental and Health Risk Assessment and Management Paolo Ricci, 2006-01-27 This textbook is about the law economics practical assessment and the management of risky activities arising from routine catastrophic environmental and occupational exposures to hazardous agents The textbook begins where emission and exposure analysis end by providing estimates or predictions of deleterious exposures Thus we deal with determining the nature and form of relations between exposure and response damage functions and with the principles and methods used to determine the costs and benefits of risk management actions from the vantage point of single and multiple decision makers Today national and international laws conventions and protocols are increasingly concerned with reducing environmental and health risks through minimizing exposure to toxic substances bacteria viruses and other noxious agents They do so through risk methods The reason for the now worldwide use of risk assessment and management is that individuals and society must decide when and at what cost past and future hazardous conditions can either be avoided or minimized In this process society must account for the limited resources it can spend to remain sustainable Risk based methods play a pivotal role in identifying and ranking alternative sustainable choices while accounting for uncertainty and variability Specifically most reductions in risks require a balancing of the costs and benefits associated with the action to reduce exposure to a hazard and thus risk This balancing necessarily involves linking exposure and response through causation This essential aspect of risk assessment and management if done incorrectly can be costly to society

Machine Learning in Production Christian

Kastner, 2025-04-08 A practical and innovative textbook detailing how to build real world software products with machine learning components not just models Traditional machine learning texts focus on how to train and evaluate the machine learning model while MLOps books focus on how to streamline model development and deployment But neither focus on how

to build actual products that deliver value to users This practical textbook by contrast details how to responsibly build products with machine learning components covering the entire development lifecycle from requirements and design to quality assurance and operations Machine Learning in Production brings an engineering mindset to the challenge of building systems that are usable reliable scalable and safe within the context of real world conditions of uncertainty incomplete information and resource constraints Based on the author s popular class at Carnegie Mellon this pioneering book integrates foundational knowledge in software engineering and machine learning to provide the holistic view needed to create not only prototype models but production ready systems Integrates coverage of cutting edge research existing tools and real world applications Provides students and professionals with an engineering view for production ready machine learning systems Proven in the classroom Offers supplemental resources including slides videos exams and further readings
