Medical Data Analysis Jose Crespo, Victor Maojo, Fernando Martin, 2003-08-06 The 2nd International Symposium on Medical Data Analysis ISMDA 2001 was the continuation of the successful ISMDA 2000 a conference held in Frafurt Germany in September 2000 The ISMDA conferences were conceived to integrate interdisciplinary research from scientific fields such as statistics signal processing medical informatics data mining and biometrics for biomedical data analysis A number of academic and professional people from those fields including computer scientists statisticians physicians engineers and others realized that new approaches were needed to apply successfully all the traditional techniques methods and tools of data analysis to medicine ISMDA 2001 as its predecessor aimed to provide an international forum for sharing and exchanging original research ideas and practical development experiences This year we broadened the scope of the conference to include methods for image analysis and bioinformatics Both are exciting scientific research fields and it was clear to the scientific committee that they had to be included in the areas of interest Medicine has been one of the most difficult application areas for computing The number and importance of the different issues involved suggests why many data analysis researchers find the medical domain such a challenging field New interactive approaches are needed to solve these problems
