Budgeting is arguably the single most important function in government. Every year governments spend considerable sums on expenditure programs and activities as well as time preparing and executing the budget. It is therefore crucial that anyone interested in a career in public administration has a fundamental grasp of these basics. This second edition textbook integrates theory and practice of public budgeting into a single volume. The first part introduces the background to budgeting, focusing especially on taxation, government expenditure, and revenue. The second part focuses on budgeting basics in particular operating and capital budget. The final part deals with budgeting tools, especially those related to capital rationing, budget forecasting, and analyzing government revenue and expenditure. Written in a concise and easy-to-understand manner, this book captures the multidimensional nature of public budgeting that both students and practitioners will find useful. This second edition has been fully revised and updated as well as expanded to include new material and exercises. It will appeal to all those studying public administration, financial management, and public budgeting.
