

1. (5 points) Table 4.8 (Snoeyink and Jenkins) shows the concentration of carbonate species for solutions with distilled water and 10^{-5}M solutions of H_2CO_3^* ; sodium bicarbonate, NaHCO_3 ; and sodium carbonate, Na_2CO_3 , in a system open to the atmosphere and in a closed system.
- Why does the concentration of H_2CO_3^* remain constant in the open system (across the different solutions) and decreases in a closed system?
 - For both systems, the concentration of H^+ decreases when comparing a solution of distilled water and 10^{-5}M solutions of H_2CO_3^* ; NaHCO_3 ; Na_2CO_3 with lowest concentration observed for Na_2CO_3 . The decrease in H^+ concentration is greater for a closed system than for an open system. Explain this difference.

Water Treatment Unit Processes David W. Hendricks, 2018-10-03 The unit process approach common in the field of chemical engineering was introduced about 1962 to the field of environmental engineering An understanding of unit processes is the foundation for continued learning and for designing treatment systems The time is ripe for a new textbook that delineates the role of unit process principles in environmental engineering Suitable for a two semester course *Water Treatment Unit Processes Physical and Chemical* provides the grounding in the underlying principles of each unit process that students need in order to link theory to practice Bridging the gap between scientific principles and engineering practice the book covers approaches that are common to all unit processes as well as principles that characterize each unit process Integrating theory into algorithms for practice Professor Hendricks emphasizes the fundamentals using simple explanations and avoiding models that are too complex mathematically allowing students to assimilate principles without getting sidelined by excess calculations Applications of unit processes principles are illustrated by example problems in each chapter Student problems are provided at the end of each chapter the solutions manual can be downloaded from the CRC Press Web site Excel spreadsheets are integrated into the text as tables designated by a CD prefix Certain spreadsheets illustrate the idea of scenarios that emphasize the idea that design solutions depend upon assumptions and the interactions between design variables The spreadsheets can be downloaded from the CRC web site The book has been designed so that each unit process topic is self contained with sidebars and examples throughout the text Each chapter has subheadings so that students can scan the pages and identify important topics with little effort Problems references and a glossary are found at the end of each

chapter Most chapters contain downloadable Excel spreadsheets integrated into the text and appendices with additional information Appendices at the end of the book provide useful reference material on various topics that support the text This design allows students at different levels to easily navigate through the book and professors to assign pertinent sections in the order they prefer The book gives your students an understanding of the broader aspects of one of the core areas of the environmental engineering curriculum and knowledge important for the design of treatment systems Water and Wastewater Calculations Manual, 2nd Ed. removal from water have also been applied and a variety of disinfection methods or combinations of disinfecting agents have been investigated with the aim to produce safe drinking water containing the minimum possible concentrations of DBPs. This book deals with the advances in control of DBPs in drinking water systems. Further than an providing an overview of existing disinfection techniques and by products up to date information on the parameters affecting the procedures of DBPs formation analytical methods for their determination toxicity regulation it pays special emphasis on the advanced treatment methods applied recently for DBPs control and presents recent promising findings as well as case studies in this field as the relevant research is proceeding producing more knowledge and practical solutions in regard to the disinfected drinking water quality.
