A Multidisciplinary Introduction to Desalination

Alireza Bazargan, 2022-09-01 Although more than 70% of the globe is covered with water only a small portion is suitable for direct human use making the scarcity of freshwater one of our planet's most serious challenges In this context desalination defined as the removal of salt from water is one of the possible solutions for overcoming our planet's municipal and industrial thirst By drawing upon the authoritative expertise of a remarkable team of international authors this book aims to provide an encompassing and multidisciplinary introduction to various aspects of desalination The forte of this publication is that it does not overtly focus on a particular sub topic of desalination but rather addresses the topic as a whole In other words the unique assortment of reader friendly chapters is designed to strike a delicate balance between the technical and non technical The book is divided into five general sections The first section presents an overview of water scarcity followed by a review of integrated water management and the alternatives to desalination The fundamentals of desalination are provided including simple water chemistry The second section covers the conventional technologies of today including thermal and membrane desalination processes The topics of pre and post treatment are given due credit as no desalination plant can operate without them The third section reviews the history of how desalination technologies originated including a review of today's R&D Section four is concerned with energy and environmental issues including the application of renewable and nuclear energy minimization of energy usage and the water energy nexus brine management and environmental impacts Finally section five covers the social and commercial issues ranging from rural desalination to the politics of desalination Desalination costs and feasibility are presented as well as issues in business development and the future market prospects Effectively A Multidisciplinary Introduction to Desalination aims to be a holistic go to compendium for anyone seeking a balanced understanding of the various facets of desalination Lees' Loss Prevention in the Process Industries Frank

Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard

reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world s chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field
