Us Forest Service Fia Manual:

Monitoring Manual for Grassland, Shrubland and Savanna Ecosystems, Volume II: Design, Supplementary Methods and Interpretation, 2005, 2005 Forest Inventory and Analysis National Data Quality Assessment Report for 2000 to 2003
James E. Pollard, 2006 The Forest Inventory and Analysis program FIA is the key USDA Forest Service USFS program that provides the information needed to assess the status and trends in the environmental quality of the Nation's forests The goal of the FIA Quality Assurance QA program is to provide a framework to assure the production of complete accurate and unbiased forest information of known quality Specific Measurement Quality Objectives MQO for precision are designed to provide a window of performance that we are striving to achieve for every field measurement These data quality goals were developed from knowledge of measurement processes in forestry and forest ecology as well as the program needs of FIA This report is a national summary and compilation of MQO analyses by regional personnel and the National QA Advisor The efficacy of the MQO as well as the measurement uncertainty associated with a given field measurement can be tested by comparing data from blind check plots where in addition to the field measurements of the standard FIA crew a second QA measurement of the plot was taken by a crew without knowledge of the first crew's results These QA data were collected between 2000 and 2003 and analyzed for measurement precision between FIA crews The charge of this task team was to use the blind check data to assess the FIA program's ability to meet data quality goals as stated by the MQO The results presented indicate that the repeatability was within project goals for a wide range of measurements across a variety of forest and nonforest environments However there were some variables that displayed noncompliance with MQO goals In general there were two types of noncompliance the first is where all the regions were below the MQO standard and the second is where a subset of the regions was below the MQO standards or was substantially different from the other remaining regions Results for each regional analysis are presented in appendix tables In the course of the study the task team discovered that there were difficulties in analyzing seedling species and seedling count variables for MQO compliance and recommends further study of the issue Also the task team addresses the issue of trees missed or added and recommends additional study of this issue Lastly the team points out that traditional MQO analysis of the disturbance and treatment variables may not be adequate Some attributes where regional compliance rates are dissimilar suggest that regional characteristics environmental variables such as forest type physiographic class and forest fragmentation may have an impact on the ability to obtain consistent measurements Additionally differences in data collection protocols may cause differences in compliance rates For example a particular variable may be measured with a calibrated instrument in one region while ocularly estimated in another region Comprehensive Regional Resource Assessments and Multipurpose Uses of Forest Inventory and Analysis Data, 1976 to 2001 Victor A. Rudis, 2003 Forest Inventory and Analysis National Data Quality Assessment Report for 2000 to 2003, 2006 *General Technical Report SRS*, 2003 **General Technical Report RMRS**, 1998 **General**

Technical Report NC. ,1981 **General Technical Report WO** ,2006 Field Instructions for the Annual Inventory of Washington, Oregon and California ,2004 ,2004 *Field Instructions for the Annual Inventory of Washington, Oregon, and California* ,2002 ,2002 Proceedings of the Third Annual Forest Inventory and Analysis Symposium ,2002 *General Technical Report PNW-GTR* ,2004 Field Measurements for Forest Carbon Monitoring Coeli M Hoover,2008-10-20 In the summer of 2003 a workshop was held in Portsmouth NH to discuss land measurement techniques for the North American Carbon Program Over 40 scientists representing government agencies academia and nonprofit research organizations located in Canada the US and Mexico participated During the course of the workshop a number of topics were discussed with an emphasis on the following The need for an intermediate tier of carbon measurements This level of study would be more extensive than state level inventories of the US Forest Service Forest Inventory and Analysis Program but less detailed than intensive ecosystem studies sites such as those in Long Term Ecological Research network This tier would ideally provide a basis to link and scale remote sensing measurements and inventory data and supply data required to parameterize existing models see Wofsy and Harriss 2002 Denning et al 2005 The design criteria that such a network of sites should meet The network and sampling design should be standardized but flexible enough to be applied across North America The design also needs to be efficient enough to be implemented without the need for large field crews yet robust enough to provide useful information Finally the spatial scale must permit easy linkage to remotely sensed data The key variables that should be measured at each site and the frequency of measurement **Estimation Procedures for the Combined 1990s Periodic Forest Inventories of California, Oregon, and Washington** Tara M. Barrett,2004 During the 1990s forest inventories for California Oregon and Washington were conducted by different agencies using different methods The Pacific Northwest Research Station Forest Inventory and Analysis program recently integrated these inventories into a single database This document briefly describes potential statistical methods for estimating population totals means and associated sampling errors for these inventories Differences in estimates using past methods for periodic inventories compared to estimates from proposed methods for a new annual inventory system were generally minor This document is intended to be a resource for researchers using the 1990s forest inventory data for these states examples are included to illustrate issues

State-of-the-art Methodology of Forest Inventory Vernon J. LaBau,Tiberius Cunia,1990 **A History of the Forest Survey in the United States** ,2007 This publication presents a history of the Forest Survey now known as Forest Inventory and Analysis program in the United States as it evolved within the U S Department of Agriculture USDA Forest Service over a period of more than 100 years It draws on the writings of several authors who have published on various aspects of the Forest Survey program A review is presented of nine ground plot designs used in the Forest Survey and Forest Inventory and Analysis FIA programs since 1931 This publication also highlights the major events contributing to the current FIA program beginning as far back as 1830 It is impressive to look at the many contributions of various people working with the Nation s

Forest Survey program as well as the various methodologies that have contributed to understanding and updating the national forest survey statistics It is especially timely that this historical report should occur at the time the Forest Service just celebrated the anniversary of its 100 years of service to the American people Publisher s website *Proceedings RMRS*. ,1998 *Wetland Forest Statistics for the South Atlantic States* Mark J. Brown,2001 *Resource Bulletin SRS* ,2001

Sustainable Forestry Keith M. Reynolds,2007-01-01 This book reviews the current state of the art within each of the four major themes science and policy inventory and monitoring statistics and modelling and information and knowledge management in the context of sustainable forestry It fosters dialogue across thematic areas concerning both strategic and operational approaches to integrate research on sustainable forestry It also enhances and encourages international collaboration towards sustainable forestry practice worldwide
