

JUNIOR CERTIFICATE GEOGRAPHY

PHYSICAL GEOGRAPHY

GLACIATION

PROCESSES

Erosion, Transportation & Deposition

Processes of Erosion

Plucking
Abrasion

The amount of erosion will vary depending on the amount of glacial movement, bedrock type & thickness of the ice

Transportation

Eroded material (moraine) carried in the ice
Sides and bottom of glacier may melt due to friction

Processes of Deposition

Glaciers drop their load due to ablation (melting)
Ablation due to rise in temperature
2 categories of glacial deposition
a. Boulder clays (glacial till) unsorted
b. Fluvio – glacial (glacial meltwater) sorted

HOW IS A GLACIER FORMED ?

The climate gets colder and colder until the amount of snowfall becomes greater than the melt rate (*ablation*). More layers of snow fall on each other – lower layers are compressed into ice (*neve / fern*)

More snow falls – pressure increased – all air squeezed out of neve forming 'blue ice'
The glacier will begin to move if the force of gravity causes them to slide under their own weight.

Features of Glacial Erosion

Cirque / Corrie – large circular hollows around mountain peaks. Often filled with water known as a *corrie lake* or a *tarn*. Cirques usually the birthplace of a glacier (see above). The hollow in which the glacier was formed is then hollowed more by the ice plucking rock from the backwall of the hollow and then using this plucked rock to abrade the bottom of the hollow even more. The more the glacier moves downslope, the larger the hollow will become. When two cirques form back to back, a narrow ridge called an *arête* is formed

Example of a corrie is *Peddlars Lake* in Conor pass , Dingle peninsula

U Shaped valley

Glaciers try to follow the path of river valleys – widening them to form U shaped valleys. Interlocking spurs removed leaving *truncated spurs*. *Pater Noster lakes* often form due to scouring of valley floor at different intervals.

Other features of glacial erosion – hanging valleys, crag & tail, *roches moutonnées*.

Features of Glacial Deposition

Moraines

Lateral – on the side of glaciers, *Medial* underneath the middle of a glacier

Terminal – occurs at the snout of the glacier at right angles to it
