

## Saturated and Unsaturated Solutions

Is there a limit to the amount of solute that will dissolve in a solvent?

### Why?

We use solutions every day. People who wear contact lenses use "lens solution" to rinse their contacts and keep them wet. Athletes who consume sports drinks after exercising benefit from the electrolytes in those solutions. This activity will explore whether or not there is a limit to how much of one substance can dissolve in another.

The solubility of gases and liquids in liquids is of great importance in large areas of operations based on chemical concepts Phenomena have appeared to be so varied that even experts have from time to time remarked on the difficulty of seeing a consistent pattern Now for the first time the essential pattern of all known gas solubility data is set out in a graphic form for all to see The continuous merging of the gas liquid systems and the liquid liquid systems is also illustrated The pattern opens the way to rational predictions The new data given for the lower alkanes and alkenes the three methylamines ammonia bromomethane and chloroethane together with my previously reported data on hydrogen sulfide dimethyl ether chloromethane and sulfur dioxide have been obtained by a bubbler manometer procedure which is fully described Not only are these data of significance in many chemical processes but they have also been vital to the development of the overall essential pattern covering all gases The book is for chemists chemical engineers biotechnologists certain physi cists and teachers and students
