Masson, D. Midgley, 1988 **Hypogene Karst Regions and Caves of the World** Alexander Klimchouk, Arthur N. Palmer, Jo De Waele, Augusto S. Auler, Philippe Audra, 2017-08-17

This book illustrates the diversity of hypogene speleogenetic processes and void conduit patterns depending on variations of the geological environments by presenting regional and cave specific case studies. The cases include both well known and newly recognized hypogene karst regions and caves of the world. They all focus on geological hydrogeological geodynamical and evolutionary contexts of hypogene speleogenesis. The last decade has witnessed the boost in recognition of the possibility of global occurrence and practical importance of hypogene karstification. Speleogenesis is the development of solutional porosity and permeability by upwelling flow independent of recharge from the overlying or immediately adjacent surface. Hypogene karst has been identified and documented in many regions where it was previously overlooked or misinterpreted. The book enriches the basis for generalization and categorization of hypogene karst and thus improves our ability to adequately model hypogene karstification and predict related porosity and permeability. It is a book which benefits every researcher, student and practitioner dealing with karst.

Statistical Mechanics: Entropy, Order Parameters, and Complexity James P. Sethna, 2021-01-26. Statistical mechanics is our tool for deriving the laws that emerge from complex systems. Sethna's text distills the subject to be accessible to those in all realms of science and engineering, avoiding extensive use of quantum mechanics, thermodynamics, and molecular physics. Statistical mechanics explains how bacteria search for food and how DNA replication is proof read in biology; optimizes data compression and explains transitions in complexity in computer science; explains the onset of chaos and launched random matrix theory in mathematics; addresses extreme events in engineering and models pandemics and language usage in the social sciences. Sethna's exercises introduce physicists to these triumphs and a hundred others broadening the horizons of scholars both practicing and nascent. Flipped classrooms and remote learning can now rely on 33 pre-class exercises that test reading comprehension. Emergent vs. fundamental weirdness in high dimensions. Aging, entropy, and DNA and 70 in-class activities that illuminate and broaden knowledge. Card shuffling. Human correlations. Crackling noises. Science is awash in information providing ready access to definitions, explanations, and pedagogy. Sethna's text focuses on the tools we use to create new laws and on the fascinating simple behavior in complex systems that statistical mechanics explains.
