Seismic soil structure interaction of navigation locks Maltidis, Georgios, 2017-12-20 This work handles the seismic soil and water structure interaction of navigation locks in the field of elastodynamics The investigation is based on numerical analysis with the finite element method The findings extend the results of available theories and studies and allow for a more precise analysis and design of such structures Suggestions about the numerical analysis of such problems are also presented The results can be used also for quay and retaining walls

Calendar University of Aberdeen, 1919 **Seismic Performance of Soil-Foundation-Structure Systems** Nawawi Chouw, Rolando P. Orense, Tam Larkin, 2017-08-25 Seismic Performance of Soil Foundation Structure Systems presents invited papers presented at the international workshop University of Auckland New Zealand 21 22 November 2016 This international workshop brought together outstanding work in earthquake engineering that embraces a holistic consideration of soil foundation structure systems For example the diversity of papers in this volume is represented by contributions from the fields of shallow foundation in liquefiable soil spatially distributed lifelines bridges clustered structures see photo on front cover sea floor seismic motion multi axial ground excitation deep foundations soil foundation structure fluid interaction

liquefaction induced settlement and uplift with SFSI A fundamental knowledge gap is manifested by the isolated manner geotechnical and structural engineers work A holistic consideration of soil foundation structures systems is only possible if civil engineers work collaboratively to the mutual benefit of all disciplines Another gap occurs by the retarded application of up to date research findings in engineering design practices Seismic Performance of Soil Foundation Structure Systems is the outcome from the recognized need to close this gap since it has been observed that a considerable delay exists between published research findings and application of the principles revealed by the research Seismic Performance of Soil Foundation Structure Systems will be helpful in developing more understanding of the complex nature of responses these systems present under strong earthquakes and will assist engineers in closing the gaps identified above **Glasgow**
