The Traveling Salesman Problem David L. Applegate,Robert E. Bixby,Vašek Chvátal,William J. Cook,2011-09-19 This book presents the latest findings on one of the most intensely investigated subjects in computational mathematics the traveling salesman problem It sounds simple enough given a set of cities and the cost of travel between each pair of them the problem challenges you to find the cheapest route by which to visit all the cities and return home to where you began Though seemingly modest this exercise has inspired studies by mathematicians chemists and physicists Teachers use it in the classroom It has practical applications in genetics telecommunications and neuroscience The authors of this book are the same pioneers who for nearly two decades have led the investigation into the traveling salesman problem They have derived solutions to almost eighty six thousand cities yet a general solution to the problem has yet to be discovered Here they describe the method and computer code they used to solve a broad range of large scale problems and along the way they demonstrate the interplay of applied mathematics with increasingly powerful computing platforms They also give the fascinating history of the problem how it developed and why it continues to intrigue us

Decomposition Techniques in Mathematical Programming Antonio J. Conejo,Enrique Castillo,Roberto Minguez,Raquel Garcia-Bertrand,2006-04-28 Optimization plainly dominates the design planning operation and c trol of engineering systems This is a book on optimization that considers particular cases of optimization problems those with a decomposable str ture

that can be advantageously exploited Those decomposable optimization problems are ubiquitous in engineering and science applications The book considers problems with both complicating constraints and complicating variables and analyzes linear and nonlinear problems with and without integer variables The decomposition techniques analyzed include Dantzig Wolfe Benders Lagrangian relaxation Augmented Lagrangian decomposition and others Heuristic techniques are also considered Additionally a comprehensive sensitivity analysis for characterizing the solution of optimization problems is carried out This material is particularly novel and of high practical interest This book is built based on many clarifying illustrative and computational examples which facilitate the learning procedure For the sake of clarity theoretical concepts and computational algorithms are assembled based on these examples The results are simplicity clarity and easy learning We feel that this book is needed by the engineering community that has to tackle complex optimization problems particularly by practitioners and researchers in Engineering Operations Research and Applied Economics The descriptions of most decomposition techniques are available only in complex and specialized mathematical journals difficult to understand by engineers A book describing a wide range of decomposition techniques emphasizing problem solving and appropriately blending theory and application was not previously available

Stochastic and Statistical Methods in Hydrology and Environmental Engineering Keith W. Hipel, 2012-12-06 Objectives The current global environmental crisis has reinforced the need for developing flexible mathematical models to obtain a better understanding of environmental problems so that effective remedial action can be

taken Because natural phenomena occurring in hydrology and environmental engineering usually behave in random and probabilistic fashions stochastic and statistical models have major roles to play in the protection and restoration of our natural environment Consequently the main objective of this edited volume is to present some of the most up to date and promising approaches to stochastic and statistical modelling especially with respect to groundwater and surface water applications Contents As shown in the Table of Contents the book is subdivided into the following main parts GENERAL ISSUES PART I PART II GROUNDWATER PART III SURFACE WATER PART IV STOCHASTIC OPTIMIZATION PART V MOMENT ANALYSIS PART VI OTHER TOPICS Part I raises some thought provoking issues about probabilistic modelling of hydro logical and environmental systems The first two papers in Part I are in fact keynote papers delivered at an international environmetrics conference held at the University of Waterloo in June 1993 in honour of Professor T E Unny In his keynote pa per Dr S J Burges of the University of Washington places into perspective the historical and future roles of stochastic modelling in hydrology and environmental engineering Additionally Dr Burges stresses the need for developing a sound scien tific basis for the field of hydrology Professor P E

Modeling Dynamic Transportation Networks Bin Ran, David Boyce, 2012-12-06 This book seeks to summarize our recent progress in dynamic trans portation network modeling It concentrates on ideal dynamic network models based on actual travel times and their corresponding solution algorithms In contrast our first book DynamIc Urban Transportation Network Models The ory and Implications for Intelligent Vehicle Hzghway Systems Springer Verlag 1994 focused on instantaneous dynamic network models Comparing the two books the major differences can be summarized as follows 1 This book uses the variational inequality problem as the basic formulation approach and considers the optimal control problem as a subproblem for solution purposes The former book used optimal control theory as the basic formulation approach which caused critical problems in some circumstances 2 This book focuses on ideal dynamic network models based on actual travel times The former book focused on instantaneous dynamic network models based on currently prevailing travel times 3 This book formulates a stochastic dynamic route choice model which can utilize any possible route choice distribution function instead of only the logit function 4 This book reformulates the bilevel problem of combined departure time route choice as a one level variational inequality 5 Finally a set of problems is provided for classroom use In addition this book offers comprehensive insights into the complexity and challenge of applying these dynamic network models to Intelligent Trans portation Systems ITS Nevertheless the models in this text are not yet fully evaluated and are subject to revision based on future research

Optimization in Science and Engineering Themistocles M. Rassias, Christodoulos A.

Floudas, Sergiy Butenko, 2014-05-29 Optimization in Science and Engineering is dedicated in honor of the 60th birthday of Distinguished Professor Panos M Pardalos. Pardalos's past and ongoing work has made a significant impact on several theoretical and applied areas in modern optimization. Topics highlight recent developments and include Deterministic global optimization, Variational inequalities and equilibrium problems, Approximation and complexity in numerical optimization, Non smooth optimization, Statistical models and data mining, Applications of optimization in medicine, energy systems and complex network analysis. This volume will be of great interest to graduate students, researchers and practitioners in the fields of optimization and engineering. *Advanced Methods in Transportation Analysis*

Lucio Bianco, Paolo Toth, 2012-12-06 This volume is a compendium of papers presented during the second TRIennial Symposium on Transportation ANALysis, TRISTAN II, that took place in Capri, Italy, on June 23-28, 1994. The Symposium was organized by the Progetto Finalizzato Trasporti and the Istituto di Analisi dei Sistemi ed Informatica of the Italian National Research Council jointly with the Italian Operations Research Society. The purpose of this kind of meetings is to periodically allow an exchange of views and findings by scientists in the field of transportation analysis, methods and tools. Therefore, the papers presented dealt with a wide range of topics and cover the different aspects of transportation analysis. The material contained in this book gives particular emphasis to the development of mathematical modelling and algorithms. This development is due to the evolution of digital computers and the continuous increase of the computing power. In fact, the need of solving large scale problems, crew scheduling, network traffic control, pollution monitoring and control, etc., involves in some cases thousands of variables and therefore sophisticated mathematical models and computational algorithms. **Dynamic Urban Transportation Network Models**

Bin Ran, David Boyce, 2012-12-06 Intelligent Vehicle Highway Systems are providing a welcome stimulus to research on dynamic urban transportation network models. This book presents a new generation of models for solving dynamic travel choice problems, including traveler's destination choice, mode choice, departure/arrival time choice and route choice. These models are expected to function as off-line travel forecasting and evaluation tools and eventually as on-line prediction and control models in advanced traveler information and traffic management systems. In addition to a rich set of new formulations and solution algorithms, the book provides a summary of the necessary mathematical background and concludes with a discussion of the requirements for model implementation.
