

Chapter 1 Solutions

Problem 1.1 (10 points) Possible answers include:

FC advantages over other power conversion devices:

1. Potentially higher efficiency.
2. Solid state components have no moving parts, giving higher reliability and lower maintenance costs.
3. Silent operation.
4. Low emissions.
5. Fuel cells refuel rather than recharge, which could be faster.

Disadvantages:

1. Cost.
2. Low power density.
3. Problems of hydrogen storage, production, and transport.
4. Lower energy density for non-hydrogen fuels.
5. Temperature problems: PEMs can't start in the cold, high temperatures of SOFCs create materials, thermal cycling, and sealing problems.
6. Water management issues in PEMs.

Applications:

1. Portable applications (such as laptops, cell phones, etc.) where their fast refueling, silent operation, and independent scaling of fuel reservoir and power make fuel cells an attractive option.
2. Transportation applications where their low emissions and high efficiency make fuel cells an attractive option.
3. Power generation applications where their silent operation, low emissions, and high efficiency make fuel cells amenable to siting in cities for distributed generation (DG) applications, reducing the cost of power distribution and possibly making process heat available for combined heating and power applications.
