Modelling Machine Emotions for Realizing Intelligence Toyoaki Nishida,Colette Faucher,2010-06-21 Emotion connects the thought to the body which is a magnificent biological vice for sensing and affecting the world The thought controls the body through emotions The body affects the thought through emotions Through this mechanism the thought allows the agent to behave intelligently in the complex world filled with a huge amount of dynamic information The emotion maps a flux of information into a space which the agent is familiar with enabling her him to associate ongoing events with past experiences which help to reduce complexity by providing with a nominal solution Recent findings in brain science suggest that mirror neurons map visual signals into motor signals for the body This mechanism might permit one to experience the emotion of the other agent just by feeling the motor signals caused by mirror neurons as a result of visual stimuli caused by the other agent s emotional behaviors In particular it might play a significant role in invoking empathy in a social situation It may not be hard to think about what might happen to emotion less machines The emotion less machines

may not be able to accumulate experiences to avoid serious failures They may not be able to communicate with the humans in an empathetic way
